CNOT6 Protein (AA 1-557) (His tag)

Image

Go to Product page

Overview

Quantity:	1 mg
Target:	CNOT6
Protein Characteristics:	AA 1-557
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This CNOT6 protein is labelled with His tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

Product Details

Sequence:

Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Human CNOT6 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in baculovirus infected SF9 insect cells:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity: >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility: 0.22 µm filtered

Endotoxin Level: Protein is endotoxin free.

Grade: Crystallography grade

Target Details

Target:	CNOT6
Alternative Name:	CNOT6 (CNOT6 Products)
Background:	Poly(A) nuclease with 3'-5' RNase activity. Catalytic component of the CCR4-NOT complex
	which is one of the major cellular mRNA deadenylases and is linked to various cellular
	processes including bulk mRNA degradation, miRNA-mediated repression, translational
	repression during translational initiation and general transcription regulation. Additional
	complex functions may be a consequence of its influence on mRNA expression. Involved in
	mRNA decay mediated by the major-protein-coding determinant of instability (mCRD) of the
	FOS gene in the cytoplasm. In the presence of ZNF335, enhances ligand-dependent
	transcriptional activity of nuclear hormone receptors, including RARA. The increase of ligand-
	dependent ESR1-mediated transcription is much smaller, if any. Mediates cell proliferation and
	cell survival and prevents cellular senescence. {ECO:0000269 PubMed:11889047,
	ECO:0000269 PubMed:18180299, ECO:0000269 PubMed:20065043,
	ECO:0000269 PubMed:21233283}.
Molecular Weight:	64.3 kDa Including tag.
UniProt:	Q9ULM6
