## Datasheet for ABIN3091931 CSNK2A2 Protein (AA 1-350) (Strep Tag)

Overview

Quantity:	1 mg
Target:	CSNK2A2
Protein Characteristics:	AA 1-350
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This CSNK2A2 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB)

### Product Details

Sequence:	MPGPAAGSRA RVYAEVNSLR SREYWDYEAH VPSWGNQDDY QLVRKLGRGK YSEVFEAINI
	TNNERVVVKI LKPVKKKKIK REVKILENLR GGTNIIKLID TVKDPVSKTP ALVFEYINNT
	DFKQLYQILT DFDIRFYMYE LLKALDYCHS KGIMHRDVKP HNVMIDHQQK KLRLIDWGLA
	EFYHPAQEYN VRVASRYFKG PELLVDYQMY DYSLDMWSLG CMLASMIFRR EPFFHGQDNY
	DQLVRIAKVL GTEELYGYLK KYHIDLDPHF NDILGQHSRK RWENFIHSEN RHLVSPEALD
	LLDKLLRYDH QQRLTAKEAM EHPYFYPVVK EQSQPCADNA VLSSGLTAAR
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure</li> </ul>

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 1/5 | Product datasheet for ABIN3091931 | 04/16/2024 | Copyright antibodies-online. All rights reserved. correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.</li> </ol>
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

# Target Details

Target:	CSNK2A2
Alternative Name:	CSNK2A2 (CSNK2A2 Products)
Background:	Casein kinase II subunit alpha' (CK II alpha') (EC 2.7.11.1),FUNCTION: Catalytic subunit of a
	constitutively active serine/threonine-protein kinase complex that phosphorylates a large
	number of substrates containing acidic residues C-terminal to the phosphorylated serine or
	threonine (PubMed:11239457, PubMed:11704824, PubMed:16193064, PubMed:30898438).
	Regulates numerous cellular processes, such as cell cycle progression, apoptosis and
	transcription, as well as viral infection (PubMed:11704824, PubMed:16193064,
	PubMed:30898438). May act as a regulatory node which integrates and coordinates numerous
	signals leading to an appropriate cellular response (PubMed:12631575, PubMed:19387552,
	PubMed:19387551). During mitosis, functions as a component of the p53/TP53-dependent
	spindle assembly checkpoint (SAC) that maintains cyclin-B-CDK1 activity and G2 arrest in
	response to spindle damage (PubMed:12631575, PubMed:19387552, PubMed:19387551). Als
	required for p53/TP53-mediated apoptosis, phosphorylating 'Ser-392' of p53/TP53 following L
	irradiation (PubMed:11239457). Phosphorylates a number of DNA repair proteins in response
	to DNA damage, such as MDC1, RAD9A, RAD51 and HTATSF1, promoting their recruitment to
	DNA damage sites (PubMed:20545769, PubMed:21482717, PubMed:22325354,
	PubMed:26811421, PubMed:30898438, PubMed:35597237). Can also negatively regulate
	apoptosis (PubMed:19387552, PubMed:19387551). Phosphorylates the caspases CASP9 and
	CASP2 and the apoptotic regulator NOL3 (PubMed:12631575, PubMed:19387552,
	PubMed:19387551). Phosphorylation protects CASP9 from cleavage and activation by CASP8
	and inhibits the dimerization of CASP2 and activation of CASP8 (PubMed:12631575,
	PubMed:19387552, PubMed:19387551). Regulates transcription by direct phosphorylation of
	RNA polymerases I, II, III and IV (PubMed:12631575, PubMed:19387552, PubMed:19387551).
	Also phosphorylates and regulates numerous transcription factors including NF-kappa-B,
	STAT1, CREB1, IRF1, IRF2, ATF1, SRF, MAX, JUN, FOS, MYC and MYB (PubMed:12631575,
	PubMed:19387552, PubMed:19387551). Phosphorylates Hsp90 and its co-chaperones FKBP4
	and CDC37, which is essential for chaperone function (PubMed:19387550). Regulates Wnt
	signaling by phosphorylating CTNNB1 and the transcription factor LEF1 (PubMed:19387549).
	Acts as an ectokinase that phosphorylates several extracellular proteins (PubMed:12631575,

	PubMed:19387552, PubMed:19387551). During viral infection, phosphorylates various proteins
	involved in the viral life cycles of EBV, HSV, HBV, HCV, HIV, CMV and HPV (PubMed:12631575,
	PubMed:19387552, PubMed:19387551). {ECO:0000269 PubMed:11239457,

	ECO:0000303 PubMed:19387552}.
Molecular Weight:	41.2 kDa
UniProt:	P19784
Pathways:	SARS-CoV-2 Protein Interactome
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	$\operatorname{ALiCE}_{\mathbb{B}}$ , our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
