Datasheet for ABIN3092016 COPS4 Protein (AA 2-406) (His tag)

Image

Overview

| Quantity: | 1 mg |
|-------------------------------|--|
| Target: | COPS4 |
| Protein Characteristics: | AA 2-406 |
| Origin: | Human |
| Source: | Insect Cells |
| Protein Type: | Recombinant |
| Purification tag / Conjugate: | This COPS4 protein is labelled with His tag. |
| Application: | ELISA, SDS-PAGE (SDS), Western Blotting (WB), Crystallization (Crys) |

| | State-of-the-art algorithm used for plasmid design (Gene synthesis). |
|-------------------|---|
| | This protein is a made to order protein and will be made for the first time for your order. Our |
| | experts in the lab will ensure that you receive a correctly folded protein. |
| | The big advantage of ordering our made-to-order proteins in comparison to ordering custom |
| | made proteins from other companies is that there is no financial obligation in case the protein |
| | cannot be expressed or purified. |
| | In the unlikely event that the protein cannot be expressed or purified we do not charge anything |
| | (other companies might charge you for any performed steps in the expression process for |
| | custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression |
| | experiments or purification optimization). |
| | When you order this made-to-order protein you will only pay upon receival of the correctly |
| | folded protein. With no financial risk on your end you can rest assured that our experienced |
| | protein experts will do everything to make sure that you receive the protein you ordered. |
| | The concentration of our recombinant proteins is measured using the absorbance at 280nm. |
| | The protein's absorbance will be measured in several dilutions and is measured against its |
| | specific reference buffer. |
| | The concentration of the protein is calculated using its specific absorption coefficient. We use |
| | the Expasy's protparam tool to determine the absorption coefficient of each protein. |
| Purification: | Two step purification of proteins expressed in baculovirus infected SF9 insect cells: |
| | 1. In a first purification step, the protein is purified from the cleared cell lysate using three |
| | different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE. |
| | 2. Protein containing fractions of the best purification are subjected to second purification step |
| | through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and |
| | Western blot. |
| Purity: | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. |
| Sterility: | 0.22 µm filtered |
| Endotoxin Level: | Protein is endotoxin free. |
| Grade: | Crystallography grade |

Target Details

| Background: | Component of the COP9 signalosome complex (CSN), a complex involved in various cellular |
|---------------------|---|
| | and developmental processes. The CSN complex is an essential regulator of the ubiquitin (Ubl) |
| | conjugation pathway by mediating the deneddylation of the cullin subunits of SCF-type E3 |
| | ligase complexes, leading to decrease the Ubl ligase activity of SCF-type complexes such as |
| | SCF, CSA or DDB2. Also involved in the deneddylation of non-cullin subunits such as STON2. |
| | The complex is also involved in phosphorylation of p53/TP53, c-jun/JUN, |
| | IkappaBalpha/NFKBIA, ITPK1, IRF8/ICSBP and SNAPIN, possibly via its association with CK2 |
| | and PKD kinases. CSN-dependent phosphorylation of TP53 and JUN promotes and protects |
| | degradation by the Ubl system, respectively. {ECO:0000269 PubMed:11285227, |
| | ECO:0000269 PubMed:11337588, ECO:0000269 PubMed:12628923, |

| | ECO:0000269 PubMed:9535219}. |
| Molecular Weight: | 47.1 kDa Including tag. |
| UniProt: | Q9BT78 |
| Pathways: | Cell Division Cycle |
| Application Details | |
| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies |
| | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
| | though. |
| Comment: | In cases in which it is highly likely that the recombinant protein with the default tag will be |
| | insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to |
| | increase solubility. We will discuss all possible options with you in detail to assure that you |
| | receive your protein of interest. |
| Restrictions: | For Research Use only |

Handling

| Format: | Liquid |
|------------------|--|
| Buffer: | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer. |
| Handling Advice: | Avoid repeated freeze-thaw cycles. |
| Storage: | -80 °C |
| Storage Comment: | Store at -80°C. |
