antibodies

Datasheet for ABIN3092334 EPH Receptor A4 Protein (EPHA4) (AA 20-547) (His tag)

Overview

Image

Quantity:	1 mg
Target:	EPH Receptor A4 (EPHA4)
Protein Characteristics:	AA 20-547
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This EPH Receptor A4 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:	VTGSRVYPAN EVTLLDSRSV QGELGWIASP LEGGWEEVSI MDEKNTPIRT YQVCNVMEPS

Product Details	
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human EPHA4 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target:	EPH Receptor A4 (EPHA4)
Alternative Name:	EPHA4 (EPHA4 Products)
Background:	Receptor tyrosine kinase which binds membrane-bound ephrin family ligands residing on
	adjacent cells, leading to contact-dependent bidirectional signaling into neighboring cells. The
	signaling pathway downstream of the receptor is referred to as forward signaling while the
	signaling pathway downstream of the ephrin ligand is referred to as reverse signaling. Highly
	promiscuous, it has the unique property among Eph receptors to bind and to be physiologically
	activated by both GPI-anchored ephrin-A and transmembrane ephrin-B ligands including EFNA
	and EFNB3. Upon activation by ephrin ligands, modulates cell morphology and integrin-
	dependent cell adhesion through regulation of the Rac, Rap and Rho GTPases activity. Plays ar
	important role in the development of the nervous system controlling different steps of axonal
	guidance including the establishment of the corticospinal projections. May also control the
	segregation of motor and sensory axons during neuromuscular circuit development. In addition
	to its role in axonal guidance plays a role in synaptic plasticity. Activated by EFNA1
	phosphorylates CDK5 at 'Tyr-15' which in turn phosphorylates NGEF regulating RHOA and
	dendritic spine morphogenesis. In the nervous system, plays also a role in repair after injury
	preventing axonal regeneration and in angiogenesis playing a role in central nervous system
	vascular formation. Additionally, its promiscuity makes it available to participate in a variety of
	cell-cell signaling regulating for instance the development of the thymic epithelium.
	{EC0:0000269 PubMed:17143272}.
Molecular Weight:	59.4 kDa Including tag.
UniProt:	P54764
Pathways:	RTK Signaling
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you
	receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
