## Datasheet for ABIN3092438 FAM175B Protein (AA 1-415) (His tag)

Overview

Quantity:	1 mg
Target:	FAM175B
Protein Characteristics:	AA 1-415
Origin:	Human
Source:	Escherichia coli (E. coli)
Protein Type:	Recombinant
Purification tag / Conjugate:	This FAM175B protein is labelled with His tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB), Crystallization (Crys)

## Product Details

Sequence:	MAASISGYTF SAVCFHSANS NADHEGFLLG EVRQEETFSI SDSQISNTEF LQVIEIHNHQ
	PCSKLFSFYD YASKVNEESL DRILKDRRKK VIGWYRFRRN TQQQMSYREQ VLHKQLTRIL
	GVPDLVFLLF SFISTANNST HALEYVLFRP NRRYNQRISL AIPNLGNTSQ QEYKVSSVPN
	TSQSYAKVIK EHGTDFFDKD GVMKDIRAIY QVYNALQEKV QAVCADVEKS ERVVESCQAE
	VNKLRRQITQ RKNEKEQERR LQQAVLSRQM PSESLDPAFS PRMPSSGFAA EGRSTLGDAE
	ASDPPPPYSD FHPNNQESTL SHSRMERSVF MPRPQAVGSS NYASTSAGLK YPGSGADLPP
	PQRAAGDSGE DSDDSDYENL IDPTEPSNSE YSHSKDSRPM AHPDEDPRNT QTSQI
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	Made in Germany - from design to production - by highly experienced protein experts.
	• Human FAM175B Protein (raised in E. Coli) purified by multi-step, protein-specific process to
	ensure crystallization grade.

<ul> <li>Purification: Two step purification of proteins expressed in bacterial culture:</li> <li>1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> <li>2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ul>
When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered. The concentration of our recombinant proteins is measured using the absorbance at 280nm. The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer. The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.
<ul> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> <li>This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.</li> <li>The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.</li> <li>In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).</li> </ul>

Target Details	
Background:	Component of the BRISC complex, a multiprotein complex that specifically cleaves 'Lys-63'-
	linked polyubiquitin, leaving the last ubiquitin chain attached to its substrates
	(PubMed:19214193, PubMed:20032457, PubMed:20656690, PubMed:24075985). May act as a
	central scaffold protein that assembles the various components of the BRISC complex and
	retains them in the cytoplasm (PubMed:20656690). Plays a role in regulating the onset of
	apoptosis via its role in modulating 'Lys-63'-linked ubiquitination of target proteins (By
	similarity). Required for normal mitotic spindle assembly and microtubule attachment to
	kinetochores via its role in deubiquitinating NUMA1 (PubMed:26195665). Plays a role in
	interferon signaling via its role in the deubiquitination of the interferon receptor IFNAR1,
	deubiquitination increases IFNAR1 activities by enhancing its stability and cell surface
	expression (PubMed:24075985, PubMed:26344097). Down-regulates the response to bacterial
	lipopolysaccharide (LPS) via its role in IFNAR1 deubiquitination (PubMed:24075985). Required
	for normal induction of p53/TP53 in response to DNA damage (PubMed:25283148).
	Independent of the BRISC complex, promotes interaction between USP7 and p53/TP53, and
	thereby promotes deubiquitination of p53/TP53, preventing its degradation and resulting in
	increased p53/TP53-mediated transcription regulation and p53/TP53-dependent apoptosis in
	response to DNA damage (PubMed:25283148). {ECO:0000250 UniProtKB:Q3TCJ1,
	ECO:0000269 PubMed:19214193, ECO:0000269 PubMed:20032457,
	ECO:0000269 PubMed:20656690, ECO:0000269 PubMed:24075985,
	ECO:0000269 PubMed:25283148}.
Molecular Weight:	47.9 kDa Including tag.
UniProt:	Q15018
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you
	receive your protein of interest.
Restrictions:	For Research Use only

## Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
