Datasheet for ABIN3092495 ERBB4 Protein (AA 26-651) (His tag)

Overview

Quantity:	1 mg
Target:	ERBB4
Protein Characteristics:	AA 26-651
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This ERBB4 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

	special request, please contact us.
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human ERBB4 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target:	ERBB4
Alternative Name:	ERBB4 (ERBB4 Products)
Background:	Tyrosine-protein kinase that plays an essential role as cell surface receptor for neuregulins an
	EGF family members and regulates development of the heart, the central nervous system and
	the mammary gland, gene transcription, cell proliferation, differentiation, migration and
	apoptosis. Required for normal cardiac muscle differentiation during embryonic development
	and for postnatal cardiomyocyte proliferation. Required for normal development of the
	embryonic central nervous system, especially for normal neural crest cell migration and norm
	axon guidance. Required for mammary gland differentiation, induction of milk proteins and
	lactation. Acts as cell-surface receptor for the neuregulins NRG1, NRG2, NRG3 and NRG4 and
	the EGF family members BTC, EREG and HBEGF. Ligand binding triggers receptor dimerizatio
	and autophosphorylation at specific tyrosine residues that then serve as binding sites for
	scaffold proteins and effectors. Ligand specificity and signaling is modulated by alternative
	splicing, proteolytic processing, and by the formation of heterodimers with other ERBB family
	members, thereby creating multiple combinations of intracellular phosphotyrosines that trigg
	ligand- and context-specific cellular responses. Mediates phosphorylation of SHC1 and
	activation of the MAP kinases MAPK1/ERK2 and MAPK3/ERK1. Isoform JM-A CYT-1 and
	isoform JM-B CYT-1 phosphorylate PIK3R1, leading to the activation of phosphatidylinositol \Im
	kinase and AKT1 and protect cells against apoptosis. Isoform JM-A CYT-1 and isoform JM-B
	CYT-1 mediate reorganization of the actin cytoskeleton and promote cell migration in response
	to NRG1. Isoform JM-A CYT-2 and isoform JM-B CYT-2 lack the phosphotyrosine that mediat
	interaction with PIK3R1, and hence do not phosphorylate PIK3R1, do not protect cells against
	apoptosis, and do not promote reorganization of the actin cytoskeleton and cell migration.
	Proteolytic processing of isoform JM-A CYT-1 and isoform JM-A CYT-2 gives rise to the
	corresponding soluble intracellular domains (4ICD) that translocate to the nucleus, promote
	nuclear import of STAT5A, activation of STAT5A, mammary epithelium differentiation, cell
	proliferation and activation of gene expression. The ERBB4 soluble intracellular domains (4IC
	colocalize with STAT5A at the CSN2 promoter to regulate transcription of milk proteins during
	lactation. The ERBB4 soluble intracellular domains can also translocate to mitochondria and
	promote apoptosis. {ECO:0000269 PubMed:10348342, ECO:0000269 PubMed:10353604,

Molecular Weight:	70.8 kDa Including tag.
UniProt:	Q15303
Pathways:	RTK Signaling, Fc-epsilon Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin
	Signaling Pathway
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you
	receive your protein of interest.
Restrictions:	For Research Use only
Handling	

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
