# Datasheet for ABIN3092503 EXOSC1 Protein (AA 1-195) (Strep Tag)

### Overview

Quantity:	1 mg
Target:	EXOSC1
Protein Characteristics:	AA 1-195
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This EXOSC1 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

## Product Details

Sequence:	MAPPVRYCIP GERLCNLEEG SPGSGTYTRH GYIFSSLAGC LMKSSENGAL PVVSVVRETE
	SQLLPDVGAI VTCKVSSINS RFAKVHILYV GSMPLKNSFR GTIRKEDVRA TEKDKVEIYK
	SFRPGDIVLA KVISLGDAQS NYLLTTAENE LGVVVAHSES GIQMVPISWC EMQCPKTHTK
	EFRKVARVQP EFLQT
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expressior
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> </ul>
	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure</li> </ul>

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

• ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to
produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag
	capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

## Product Details

Grade:

Crystallography grade

## Target Details

Target:	EXOSC1
Alternative Name:	EXOSC1 (EXOSC1 Products)
Background:	Exosome complex component CSL4 (Exosome component 1),FUNCTION: Non-catalytic
	component of the RNA exosome complex which has 3'->5' exoribonuclease activity and
	participates in a multitude of cellular RNA processing and degradation events. In the nucleus,
	the RNA exosome complex is involved in proper maturation of stable RNA species such as
	rRNA, snRNA and snoRNA, in the elimination of RNA processing by-products and non-coding
	'pervasive' transcripts, such as antisense RNA species and promoter-upstream transcripts
	(PROMPTs), and of mRNAs with processing defects, thereby limiting or excluding their export
	to the cytoplasm. The RNA exosome may be involved in Ig class switch recombination (CSR)
	and/or Ig variable region somatic hypermutation (SHM) by targeting AICDA deamination activit
	to transcribed dsDNA substrates. In the cytoplasm, the RNA exosome complex is involved in
	general mRNA turnover and specifically degrades inherently unstable mRNAs containing AU-
	rich elements (AREs) within their 3' untranslated regions, and in RNA surveillance pathways,
	preventing translation of aberrant mRNAs. It seems to be involved in degradation of histone
	mRNA. The catalytic inactive RNA exosome core complex of 9 subunits (Exo-9) is proposed to
	play a pivotal role in the binding and presentation of RNA for ribonucleolysis, and to serve as a
	scaffold for the association with catalytic subunits and accessory proteins or complexes.
	EXOSC1 as peripheral part of the Exo-9 complex stabilizes the hexameric ring of RNase PH-
	domain subunits through contacts with EXOSC6 and EXOSC8.
Molecular Weight:	21.5 kDa
UniProt:	Q9Y3B2
Application Data:	
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicoline Advances This contains all the models connection acceleration and the models of the second state

Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce

even the most difficult-to-express proteins, including those that require post-translational

	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

## Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
