antibodies

Datasheet for ABIN3092700 GABBR2 Protein (AA 42-483) (His tag)

Overview

Quantity:	1 mg
Target:	GABBR2
Protein Characteristics:	AA 42-483
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This GABBR2 protein is labelled with His tag.
Application:	Western Blotting (WB), ELISA, Crystallization (Crys), SDS-PAGE (SDS)

Product Details

Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human GABBR2 Protein (raised in Insect Cells) purified by multi-step, protein-specific

Product Details

process to ensure crystallization grade.

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	1. In a first purification step, the protein is purified from the cleared cell lysate using three
	different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate
	fractions are analyzed by SDS-PAGE. 2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade
Target Details	
Target:	GABBR2
Alternative Name:	GABBR2 (GABBR2 Products)

Background:	Component of a heterodimeric G-protein coupled receptor for GABA, formed by GABBR1 and
	GABBR2. Within the heterodimeric GABA receptor, only GABBR1 seems to bind agonists, while
	GABBR2 mediates coupling to G proteins. Ligand binding causes a conformation change that
	triggers signaling via guanine nucleotide-binding proteins (G proteins) and modulates the
	activity of down-stream effectors, such as adenylate cyclase. Signaling inhibits adenylate
	cyclase, stimulates phospholipase A2, activates potassium channels, inactivates voltage-
	dependent calcium-channels and modulates inositol phospholipid hydrolysis. Plays a critical
	role in the fine-tuning of inhibitory synaptic transmission. Pre-synaptic GABA receptor inhibits
	neurotransmitter release by down-regulating high-voltage activated calcium channels, whereas
	postsynaptic GABA receptor decreases neuronal excitability by activating a prominent inwardly
	rectifying potassium (Kir) conductance that underlies the late inhibitory postsynaptic potentials.
	Not only implicated in synaptic inhibition but also in hippocampal long-term potentiation, slow
	wave sleep, muscle relaxation and antinociception. {ECO:0000269 PubMed:10328880,
	ECO:0000269 PubMed:18165688, ECO:0000269 PubMed:22660477,
	ECO:0000269 PubMed:24305054, ECO:0000269 PubMed:9872316}.
Molecular Weight:	51.0 kDa Including tag.
UniProt:	075899
Pathways:	cAMP Metabolic Process
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you
	receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
	· · · · · · · · · · · · · · · · · · ·
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.

Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
