	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in bacterial culture:
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> </ol>
	<ol> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Endotoxin has not been removed. Please contact us if you require endotoxin removal.
Grade:	Crystallography grade
Target Details	
Target:	IL-33 (IL33)
Alternative Name:	IL33 (IL33 Products)
Background:	Cytokine that binds to and signals through the IL1RL1/ST2 receptor which in turn activates NF-
	kappa-B and MAPK signaling pathways in target cells (PubMed:16286016). Involved in the
	maturation of Th2 cells inducing the secretion of T-helper type 2-associated cytokines. Also

	chemoattractant for Th2 cells, and may function as an "alarmin", that amplifies immune
	responses during tissue injury (PubMed:17853410, PubMed:18836528). {ECO:0000269 PubMed:16286016, ECO:0000269 PubMed:17853410,
	ECO:0000269 PubMed:18836528}., In quiescent endothelia the uncleaved form is constitutively
	and abundantly expressed, and acts as a chromatin-associated nuclear factor with
	transcriptional repressor properties, it may sequester nuclear NF-kappaB/RELA, lowering
	expression of its targets (PubMed:21734074). This form is rapidely lost upon angiogenic or
	proinflammatory activation (PubMed:18787100). {ECO:0000269 PubMed:18787100,
	EC0:0000269 PubMed:21734074}.
Molecular Weight:	20.8 kDa Including tag.
UniProt:	095760
Pathways:	Production of Molecular Mediator of Immune Response
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
