Datasheet for ABIN3093053 KPNA5 Protein (AA 1-536) (His tag)

Image

Overview

Quantity:	1 mg
Target:	KPNA5
Protein Characteristics:	AA 1-536
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This KPNA5 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:	MASPGKDNYR MKSYKNKALN PQEMRRRREE EGIQLRKQKR EEQLFKRRNV YLPRNDESML

Product Details	
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human KPNA5 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target:	KPNA5
Alternative Name:	KPNA5 (KPNA5 Products)
Background:	Functions in nuclear protein import as an adapter protein for nuclear receptor KPNB1. Bind
	specifically and directly to substrates containing either a simple or bipartite NLS motif. Do
	of the importin/substrate complex to the nuclear pore complex (NPC) is mediated by KPN
	through binding to nucleoporin FxFG repeats and the complex is subsequently translocate
	through the pore by an energy requiring, Ran-dependent mechanism. At the nucleoplasmic
	of the NPC, Ran binds to importin-beta and the three components separate and importin-a
	and -beta are re-exported from the nucleus to the cytoplasm where GTP hydrolysis release
	Ran from importin. The directionality of nuclear import is thought to be conferred by an
	asymmetric distribution of the GTP- and GDP-bound forms of Ran between the cytoplasm
	nucleus. Mediates nuclear import of STAT1 homodimers and STAT1/STAT2 heterodimers
	recognizing non-classical NLSs of STAT1 and STAT2 through ARM repeats 8-9. Recognize
	influenza A virus nucleoprotein through ARM repeat 7-9 In vitro, mediates the nuclear impo
	human cytomegalovirus UL84 by recognizing a non-classical NLS.
Molecular Weight:	61.3 kDa Including tag.
	015101

 UniProt:
 015131

 Pathways:
 Protein targeting to Nucleus

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.

Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
