	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in bacterial culture:
	<ol> <li>In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.</li> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Endotoxin has not been removed. Please contact us if you require endotoxin removal.
Grade:	Crystallography grade
Target Details	
Target:	Kv1.6/KCNA6 (KCNA6)
Alternative Name:	KCNA6 (KCNA6 Products)
Background:	Voltage-gated potassium channel that mediates transmembrane potassium transport in
	excitable membranes. Forms tetrameric potassium-selective channels through which
	potassium ions pass in accordance with their electrochemical gradient (PubMed:2347305,
	PubMed:14575698). The channel alternates between opened and closed conformations in

	response to the voltage difference across the membrane (PubMed:2347305,
	PubMed:14575698). Can form functional homotetrameric channels and heterotetrameric
	channels that contain variable proportions of KCNA1, KCNA2, KCNA4, KCNA6, and possibly
	other family members as well, channel properties depend on the type of alpha subunits that are
	part of the channel (By similarity). Channel properties are modulated by cytoplasmic beta
	subunits that regulate the subcellular location of the alpha subunits and promote rapid
	inactivation (By similarity). Homotetrameric channels display rapid activation and slow
	inactivation (PubMed:2347305). {ECO:0000250 UniProtKB:P17659,
	ECO:0000269 PubMed:14575698, ECO:0000269 PubMed:2347305}.
Molecular Weight:	20.3 kDa Including tag.
UniProt:	P17658
Application Details	

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
