# MBD1 Protein (AA 1-605) (His tag)

**Image** 

## Overview

Quantity:	1 mg
Target:	MBD1
Protein Characteristics:	AA 1-605
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This MBD1 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

## **Product Details**

Sequence:

MAEDWLDCPA LGPGWKRREV FRKSGATCGR SDTYYQSPTG DRIRSKVELT RYLGPACDLT LFDFKQGILC YPAPKAHPVA VASKKRKKPS RPAKTRKRQV GPQSGEVRKE APRDETKADT DTAPASFPAP GCCENCGISF SGDGTQRQRL KTLCKDCRAQ RIAFNREQRM FKRVGCGECA ACQVTEDCGA CSTCLLQLPH DVASGLFCKC ERRRCLRIVE RSRGCGVCRG CQTQEDCGHC PICLRPPRPG LRRQWKCVQR RCLRGKHARR KGGCDSKMAA RRRPGAQPLP PPPPSQSPEP TEPHPRALAP SPPAEFIYYC VDEDELOPYT NRRONRKCGA CAACLRRMDC GRCDFCCDKP KFGGSNQKRQ KCRWRQCLQF AMKRLLPSVW SESEDGAGSP PPYRRRKRPS SARRHHLGPT LKPTLATRTA QPDHTQAPTK QEAGGGFVLP PPGTDLVFLR EGASSPVQVP GPVAASTEAL LQEAQCSGLS WVVALPQVKQ EKADTQDEWT PGTAVLTSPV LVPGCPSKAV DPGLPSVKQE PPDPEEDKEE NKDDSASKLA PEEEAGGAGT PVITEIFSLG GTRFRDTAVW LPRSKDLKKP GARKQ Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a

special request, please contact us.

#### Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Human MBD1 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

### Purification:

Two step purification of proteins expressed in baculovirus infected SF9 insect cells:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Protein is endotoxin free.

Grade:

Crystallography grade

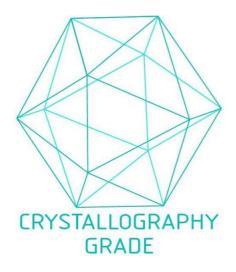

# **Target Details**

Target:	MBD1
Alternative Name:	MBD1 (MBD1 Products)
Background:	Transcriptional repressor that binds CpG islands in promoters where the DNA is methylated at
	position 5 of cytosine within CpG dinucleotides. Binding is abolished by the presence of 7-mG
	that is produced by DNA damage by methylmethanesulfonate (MMS). Acts as transcriptional
	repressor and plays a role in gene silencing by recruiting AFT7IP, which in turn recruits factors
	such as the histone methyltransferase SETDB1. Probably forms a complex with SETDB1 and
	ATF7IP that represses transcription and couples DNA methylation and histone 'Lys-9'
	trimethylation. Isoform 1 and isoform 2 can also repress transcription from unmethylated
	promoters. {ECO:0000269 PubMed:10454587, ECO:0000269 PubMed:10648624,
