

Datasheet for ABIN3093818 MEOX1 Protein (AA 1-254) (Strep Tag)

Overview

Quantity:	250 µg
Target:	MEOX1
Protein Characteristics:	AA 1-254
Origin:	Human
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MEOX1 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Brand:	AliCE®
Sequence:	MDPAASSCMR SLQPPAPVWG CLRNPHSEGN GASGLPHYPP TPFSFHQKPD FLATATAAYP
	DFSASCLAAT PHSLPQEEHI FTEQHPAFPQ SPNWHFPVSD ARRRPNSGPA GGSKEMGTSS
	LGLVDTTGGP GDDYGVLGST ANETEKKSSR RRKESSDNQE NRGKPEGSSK ARKERTAFTK
	EQLRELEAEF AHHNYLTRLR RYEIAVNLDL SERQVKVWFQ NRRMKWKRVK GGQPISPNGQ
	DPEDGDSTAS PSSE
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.

- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	MEOX1
Alternative Name:	MEOX1 (MEOX1 Products)

Target Details

Background:	Homeobox protein MOX-1 (Mesenchyme homeobox 1),FUNCTION: Mesodermal transcription
	factor that plays a key role in somitogenesis and is specifically required for sclerotome
	development. Required for maintenance of the sclerotome polarity and formation of the cranio-
	cervical joints (PubMed:23290072, PubMed:24073994). Binds specifically to the promoter of
	target genes and regulates their expression. Activates expression of NKX3-2 in the sclerotome.
	Activates expression of CDKN1A and CDKN2A in endothelial cells, acting as a regulator of
	vascular cell proliferation. While it activates CDKN1A in a DNA-dependent manner, it activates
	CDKN2A in a DNA-independent manner. Required for hematopoietic stem cell (HSCs) induction
	via its role in somitogenesis: specification of HSCs occurs via the deployment of a specific
	endothelial precursor population, which arises within a sub-compartment of the somite named
	endotome. {EC0:0000250 UniProtKB:F1Q4R9, EC0:0000250 UniProtKB:P32442,
	ECO:0000269 PubMed:23290072, ECO:0000269 PubMed:24073994}.
Molecular Weight:	28.0 kDa
UniProt:	P50221
Pathways:	Chromatin Binding
Application Details	

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
