Datasheet for ABIN3093900 MITF Protein (AA 1-526) (Strep Tag)

1 Image

Overview

Quantity:	1 mg
Target:	MITF
Protein Characteristics:	AA 1-526
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MITF protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

Product Details

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALICE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and

	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details

Target:	MITF
Alternative Name:	MITF (MITF Products)
Background:	Microphthalmia-associated transcription factor (Class E basic helix-loop-helix protein 32)
	(bHLHe32),FUNCTION: Transcription factor that acts as a master regulator of melanocyte
	survival and differentiation as well as melanosome biogenesis (PubMed:10587587,
	PubMed:22647378, PubMed:27889061, PubMed:9647758). Binds to M-boxes (5'-TCATGTG-3')
	and symmetrical DNA sequences (E-boxes) (5'-CACGTG-3') found in the promoter of
	pigmentation genes, such as tyrosinase (TYR) (PubMed:10587587, PubMed:22647378,
	PubMed:27889061, PubMed:9647758). Involved in the cellular response to amino acid
	availability by acting downstream of MTOR: in the presence of nutrients, MITF phosphorylation
	by MTOR promotes its inactivation (PubMed:36608670). Upon starvation or lysosomal stress,
	inhibition of MTOR induces MITF dephosphorylation, resulting in transcription factor activity
	(PubMed:36608670). Plays an important role in melanocyte development by regulating the
	expression of tyrosinase (TYR) and tyrosinase-related protein 1 (TYRP1) (PubMed:10587587,
	PubMed:22647378, PubMed:27889061, PubMed:9647758). Plays a critical role in the
	differentiation of various cell types, such as neural crest-derived melanocytes, mast cells,
	osteoclasts and optic cup-derived retinal pigment epithelium (PubMed:10587587,
	PubMed:22647378, PubMed:27889061, PubMed:9647758). {ECO:0000269 PubMed:10587587,
	ECO:0000269 PubMed:22647378, ECO:0000269 PubMed:27889061,
	ECO:0000269 PubMed:36608670, ECO:0000269 PubMed:9647758}.
Molecular Weight:	58.8 kDa
UniProt:	075030
Pathways:	Chromatin Binding
Application Details	

Application Notes:

In addition to the applications listed above we expect the protein to work for functional studies

	as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
