Datasheet for ABIN3095003 RFFL Protein (AA 1-363) (Strep Tag)

Image

Overview

	_
Quantity:	1 mg
Target:	RFFL
Protein Characteristics:	AA 1-363
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This RFFL protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Sequence:	MWATCCNWFC LDGQPEEVPP PQGARMQAYS NPGYSSFPSP TGLEPSCKSC GAHFANTARK
	QTCLDCKKNF CMTCSSQVGN GPRLCLLCQR FRATAFQREE LMKMKVKDLR DYLSLHDIST
	EMCREKEELV LLVLGQQPVI SQEDRTRAST LSPDFPEQQA FLTQPHSSMV PPTSPNLPSS
	SAQATSVPPA QVQENQQANG HVSQDQEEPV YLESVARVPA EDETQSIDSE DSFVPGRRAS
	LSDLTDLEDI EGLTVRQLKE ILARNFVNYK GCCEKWELME RVTRLYKDQK GLQHLVSGAE
	DQNGGAVPSG LEENLCKICM DSPIDCVLLE CGHMVTCTKC GKRMNECPIC RQYVIRAVHV FRS
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	• Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure

All rights reserved. correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade
Target Details	
Target:	RFFL
Alternative Name:	RFFL (RFFL Products)
Background:	E3 ubiquitin-protein ligase rififylin (EC 2.3.2.27) (Caspase regulator CARP2) (Caspases-8 and -
	10-associated RING finger protein 2) (CARP-2) (FYVE-RING finger protein Sakura) (Fring) (RING
	finger and FYVE-like domain-containing protein 1) (RING finger protein 189) (RING finger
	protein 34-like) (RING-type E3 ubiquitin transferase rififylin),FUNCTION: E3 ubiquitin-protein
	ligase that regulates several biological processes through the ubiquitin-mediated proteasomal
	degradation of various target proteins. Mediates 'Lys-48'-linked polyubiquitination of PRR5L and
	its subsequent proteasomal degradation thereby indirectly regulating cell migration through the
	mTORC2 complex. Ubiquitinates the caspases CASP8 and CASP10, promoting their
	proteasomal degradation, to negatively regulate cell death downstream of death domain
	receptors in the extrinsic pathway of apoptosis. Negatively regulates the tumor necrosis factor
	mediated signaling pathway through targeting of RIPK1 to ubiquitin-mediated proteasomal
	degradation. Negatively regulates p53/TP53 through its direct ubiquitination and targeting to
	proteasomal degradation. Indirectly, may also negatively regulate p53/TP53 through
	ubiquitination and degradation of SFN. May also play a role in endocytic recycling.

	EC0:0000269 PubMed:18382127, EC0:0000269 PubMed:18450452,
	ECO:0000269 PubMed:22609986}.
Molecular Weight:	40.5 kDa
UniProt:	Q8WZ73
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

 Comment:
 ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from

 Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce

 even the most difficult-to-express proteins, including those that require post-translational

	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
