antibodies

Datasheet for ABIN3095055 RNF41 Protein (AA 1-317) (Strep Tag)

Overview

| Quantity: | 1 mg |
|-------------------------------|--|
| Target: | RNF41 |
| Protein Characteristics: | AA 1-317 |
| Origin: | Human |
| Source: | Tobacco (Nicotiana tabacum) |
| Protein Type: | Recombinant |
| Purification tag / Conjugate: | This RNF41 protein is labelled with Strep Tag. |
| Application: | ELISA, Western Blotting (WB), SDS-PAGE (SDS) |

Product Details

| Sequence: | MGYDVTRFQG DVDEDLICPI CSGVLEEPVQ APHCEHAFCN ACITQWFSQQ QTCPVDRSVV |
|------------------|--|

All rights reserved. correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

| Purification: | Two step purification of proteins expressed in Almost Living Cell-Free Expression System |
|---------------|---|
| | (ALICE®): |
| | In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. |
| | 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot. |
| Purity: | >80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot. |

| Product Details | |
|---------------------|---|
| Endotoxin Level: | Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg) |
| Grade: | Crystallography grade |
| Target Details | |
| Target: | RNF41 |
| Alternative Name: | RNF41 (RNF41 Products) |
| Background: | E3 ubiquitin-protein ligase NRDP1 (EC 2.3.2.27) (RING finger protein 41) (RING-type E3 ubiquitir |
| | transferase NRDP1),FUNCTION: Acts as E3 ubiquitin-protein ligase and regulates the |
| | degradation of target proteins. Polyubiquitinates MYD88. Negatively regulates MYD88- |
| | dependent production of pro-inflammatory cytokines. Can promote TRIF-dependent production |
| | of type I interferon and inhibits infection with vesicular stomatitis virus (By similarity). Promotes |
| | also activation of TBK1 and IRF3. Involved in the ubiquitination of erythropoietin (EPO) and |
| | interleukin-3 (IL-3) receptors. Thus, through maintaining basal levels of cytokine receptors, |
| | RNF41 is involved in the control of hematopoietic progenitor cell differentiation into |
| | myeloerythroid lineages (By similarity). Contributes to the maintenance of steady-state ERBB3 |
| | levels by mediating its growth factor-independent degradation. Involved in the degradation of |
| | the inhibitor of apoptosis BIRC6 and thus is an important regulator of cell death by promoting |
| | apoptosis. Acts also as a PRKN modifier that accelerates its degradation, resulting in a |
| | reduction of PRKN activity, influencing the balance of intracellular redox state. The RNF41- |
| | PRKN pathway regulates autophagosome-lysosome fusion during late mitophagy. Mitophagy is |
| | a selective form of autophagy necessary for mitochondrial quality control (PubMed:24949970). |
| | {EC0:0000250, EC0:0000250 UniProtKB:Q8BH75, EC0:0000269 PubMed:12411582, |

| | ECO:0000269 PubMed:19483718, ECO:0000269 PubMed:24949970}. |
| Molecular Weight: | 35.9 kDa |
| UniProt: | Q9H4P4 |
| Pathways: | SARS-CoV-2 Protein Interactome |
| Application Details | |
| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies |
| | as well. As the protein has not been tested for functional studies yet we cannot offer a |
| | guarantee though. |

Application Details Comment: ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein! **Restrictions:**

For Research Use only

Handling

| Format: | Liquid |
|------------------|--|
| Buffer: | The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us. |
| Handling Advice: | Avoid repeated freeze-thaw cycles. |
| Storage: | -80 °C |
| Storage Comment: | Store at -80°C. |
| Expiry Date: | Unlimited (if stored properly) |
