Datasheet for ABIN3095435 SIX3 Protein (AA 1-332) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SIX3
Protein Characteristics:	AA 1-332
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SIX3 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)

Product Details

Sequence:	MVFRSPLDLY SSHFLLPNFA DSHHRSILLA SSGGGNGAGG GGGAGGGSGG GNGAGGGGAG
	GAGGGGGGGS RAPPEELSMF QLPTLNFSPE QVASVCETLE ETGDIERLGR FLWSLPVAPG ACEAINKHES ILRARAVVAF HTGNFRDLYH ILENHKFTKE SHGKLQAMWL EAHYQEAEKL
	RGRPLGPVDK YRVRKKFPLP RTIWDGEQKT HCFKERTRSL LREWYLQDPY PNPSKKRELA
	QATGLTPTQV GNWFKNRRQR DRAAAAKNRL QHQAIGPSGM RSLAEPGCPT HGSAESPSTA
	ASPTTSVSSL TERADTGTSI LSVTSSDSEC DV
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	 Made in Germany - from design to production - by highly experienced protein experts. Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure

All rights reserved. correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Product Details

Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details

Target:	SIX3
Alternative Name:	SIX3 (SIX3 Products)
Background:	Homeobox protein SIX3 (Sine oculis homeobox homolog 3),FUNCTION: Transcriptional
	regulator which can act as both a transcriptional repressor and activator by binding a ATTA
	homeodomain core recognition sequence on these target genes. During forebrain developmen
	represses WNT1 expression allowing zona limitans intrathalamica formation and thereby
	ensuring proper anterio-posterior patterning of the diencephalon and formation of the rostral
	diencephalon. Acts as a direct upstream activator of SHH expression in the rostral
	diencephalon ventral midline and that in turn SHH maintains its expression. In addition, Six3
	activity is required for the formation of the telencephalon. During postnatal stages of brain
	development is necessary for ependymal cell maturation by promoting the maturation of radia
	glia into ependymal cells through regulation of neuroblast proliferation and migration. Acts on
	the proliferation and differentiation of neural progenitor cells through activating transcription of
	CCND1 and CCND2. During early lens formation plays a role in lens induction and specificatio
	by activating directly PAX6 in the presumptive lens ectoderm. In turn PAX6 activates SIX3
	resulting in activation of PDGFRA and CCND1 promoting cell proliferation. Also is required for
	the neuroretina development by directly suppressing WNT8B expression in the anterior neural
	plate territory. Its action during retina development and lens morphogenesis is TLE5 and TLE4
	dependent manner. Furthermore, during eye development regulates several genes expression
	Before and during early lens development represses the CRYGF promoter by binding a SIX
	repressor element. Directly activates RHO transcription, or cooperates with CRX or NRL. Six3
	functions also in the formation of the proximodistal axis of the optic cup, and promotes the
	formation of optic vesicles-like structures. During pituitary development, acts in parallel or
	alternatively with HESX1 to control cell proliferation through Wnt/beta-catenin pathway (By
	similarity). Plays a role in eye development by suppressing WNT1 expression and in dorsal-
	ventral patterning by repressing BMP signaling pathway. {ECO:0000250 UniProtKB:Q62233,
	ECO:0000269 PubMed:18791198}.
Molecular Weight:	35.5 kDa
UniProt:	095343

Target Details	
Pathways:	Protein targeting to Nucleus
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions: Handling	For Research Use only
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
