MAPKAP1 Protein (AA 2-522) (His tag)

Image

Go to Product page

Overview

Quantity:	1 mg
Target:	MAPKAP1
Protein Characteristics:	AA 2-522
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This MAPKAP1 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:

Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a special request, please contact us.

Characteristics:

- Made in Germany from design to production by highly experienced protein experts.
- Human MAPKAP1 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in baculovirus infected SF9 insect cells:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity: >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility: 0.22 µm filtered

Endotoxin Level: Protein is endotoxin free.

Grade: Crystallography grade

Target Details

Target:	MAPKAP1
Alternative Name:	MAPKAP1 (MAPKAP1 Products)
Background:	Subunit of mTORC2, which regulates cell growth and survival in response to hormonal signals.
	mTORC2 is activated by growth factors, but, in contrast to mTORC1, seems to be nutrient-
	insensitive. mTORC2 seems to function upstream of Rho GTPases to regulate the actin
	cytoskeleton, probably by activating one or more Rho-type guanine nucleotide exchange
	factors. mTORC2 promotes the serum-induced formation of stress-fibers or F-actin. mTORC2
	plays a critical role in AKT1 'Ser-473' phosphorylation, which may facilitate the phosphorylation
	of the activation loop of AKT1 on 'Thr-308' by PDK1 which is a prerequisite for full activation.
	mTORC2 regulates the phosphorylation of SGK1 at 'Ser-422'. mTORC2 also modulates the
	phosphorylation of PRKCA on 'Ser-657'. Within mTORC2, MAPKAP1 is required for complex
	formation and mTORC2 kinase activity. MAPKAP1 inhibits MAP3K2 by preventing its
	dimerization and autophosphorylation. Inhibits HRAS and KRAS signaling. Enhances osmotic
	stress-induced phosphorylation of ATF2 and ATF2-mediated transcription. Involved in
	ciliogenesis, regulates cilia length through its interaction with CCDC28B independently of
	mTORC2 complex. {ECO:0000269 PubMed:15988011, ECO:0000269 PubMed:16962653,
	ECO:0000269 PubMed:17043309, ECO:0000269 PubMed:17054722,
	ECO:0000269 PubMed:17303383, ECO:0000269 PubMed:23727834}.
Molecular Weight:	59.9 kDa Including tag.
UniProt:	Q9BPZ7
Pathways:	PI3K-Akt Signaling, Fc-epsilon Receptor Signaling Pathway, Neurotrophin Signaling Pathway,
	Skeletal Muscle Fiber Development, CXCR4-mediated Signaling Events
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee
	though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be
	insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to
	increase solubility. We will discuss all possible options with you in detail to assure that you
	receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
