## Datasheet for ABIN3095566 Cortactin Protein (CTTN) (AA 1-550) (Strep Tag)

Overview

Image

Quantity:	1 mg
Target:	Cortactin (CTTN)
Protein Characteristics:	AA 1-550
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This Cortactin protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

## Product Details

Sequence:	MWKASAGHAV SIAQDDAGAD DWETDPDFVN DVSEKEQRWG AKTVQGSGHQ EHINIHKLRE

	have a special request, please contact us.
Characteristics:	Key Benefits:
	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.</li> <li>These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).</li> <li>State-of-the-art algorithm used for plasmid design (Gene synthesis).</li> </ul>
	This protein is a <b>made-to-order protein</b> and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our <b>made-to-order proteins</b> in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	Expression System:
	<ul> <li>ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.</li> <li>During lysate production, the cell wall and other cellular components that are not required fo protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!</li> </ul>
	Concentration:
	<ul> <li>The concentration of our recombinant proteins is measured using the absorbance at 280nm</li> <li>The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.</li> <li>We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.</li> </ul>
Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.

All rights reserved.

	<ol> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

## Target Details

Target:	Cortactin (CTTN)
Alternative Name:	CTTN (CTTN Products)
Background:	Src substrate cortactin (Amplaxin) (Oncogene EMS1),FUNCTION: Contributes to the
	organization of the actin cytoskeleton and cell shape (PubMed:21296879). Plays a role in the
	formation of lamellipodia and in cell migration. Plays a role in the regulation of neuron
	morphology, axon growth and formation of neuronal growth cones (By similarity). Through its
	interaction with CTTNBP2, involved in the regulation of neuronal spine density (By similarity).
	Plays a role in focal adhesion assembly and turnover (By similarity). In complex with ABL1 and
	MYLK regulates cortical actin-based cytoskeletal rearrangement critical to sphingosine 1-
	phosphate (S1P)-mediated endothelial cell (EC) barrier enhancement (PubMed:20861316).
	Plays a role in intracellular protein transport and endocytosis, and in modulating the levels of
	potassium channels present at the cell membrane (PubMed:17959782). Plays a role in
	receptor-mediated endocytosis via clathrin-coated pits (By similarity). Required for stabilizatio
	of KCNH1 channels at the cell membrane (PubMed:23144454). Plays a role in the invasivenes
	of cancer cells, and the formation of metastases (PubMed:16636290).

	ECO:0000269 PubMed:21296879, ECO:0000269 PubMed:23144454}.
Molecular Weight:	61.6 kDa
UniProt:	Q14247
Pathways:	MAPK Signaling
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies

Application Details	
	as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational modifications.
	During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,
	please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)

**Image 1.** "Crystallography Grade" protein due to multi-step, protein-specific purification process
