antibodies

Datasheet for ABIN3095673 SRSF10 Protein (AA 1-262) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SRSF10
Protein Characteristics:	AA 1-262
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SRSF10 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB)

Product Details

Sequence:	MSRYLRPPNT SLFVRNVADD TRSEDLRREF GRYGPIVDVY VPLDFYTRRP RGFAYVQFED
	VRDAEDALHN LDRKWICGRQ IEIQFAQGDR KTPNQMKAKE GRNVYSSSRY DDYDRYRRSR
	SRSYERRRSR SRSFDYNYRR SYSPRNSRPT GRPRRSRSHS DNDRFKHRNR SFSRSKSNSR
	SRSKSQPKKE MKAKSRSRSA SHTKTRGTSK TDSKTHYKSG SRYEKESRKK EPPRSKSQSR
	SQSRSRSKSR SRSWTSPKSS GH
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure
	correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Product Details

Grade:

Crystallography grade

Target Details

Target:	SRSF10
Alternative Name:	SRSF10 (SRSF10 Products)
Background:	Serine/arginine-rich splicing factor 10 (40 kDa SR-repressor protein) (SRrp40) (FUS-interacting
	serine-arginine-rich protein 1) (Splicing factor SRp38) (Splicing factor, arginine/serine-rich 13A)
	(TLS-associated protein with Ser-Arg repeats) (TASR) (TLS-associated protein with SR repeats)
	(TLS-associated serine-arginine protein) (TLS-associated SR protein),FUNCTION: Splicing factor
	that in its dephosphorylated form acts as a general repressor of pre-mRNA splicing
	(PubMed:11684676, PubMed:12419250, PubMed:14765198). Seems to interfere with the U1
	snRNP 5'-splice recognition of SNRNP70 (PubMed:14765198). Required for splicing repression
	in M-phase cells and after heat shock (PubMed:14765198). Also acts as a splicing factor that
	specifically promotes exon skipping during alternative splicing (PubMed:26876937). Interaction
	with YTHDC1, a RNA-binding protein that recognizes and binds N6-methyladenosine (m6A)-
	containing RNAs, prevents SRSF10 from binding to its mRNA-binding sites close to m6A-
	containing regions, leading to inhibit exon skipping during alternative splicing
	(PubMed:26876937). May be involved in regulation of alternative splicing in neurons, with
	isoform 1 acting as a positive and isoform 3 as a negative regulator (PubMed:12419250).
	{ECO:0000269 PubMed:11684676, ECO:0000269 PubMed:12419250,
	ECO:0000269 PubMed:14765198, ECO:0000269 PubMed:26876937}.
Molecular Weight:	31.3 kDa
UniProt:	075494
Pathways:	Ribonucleoprotein Complex Subunit Organization
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to produce
something that functions like a cell, but without the constraints of a living system - all that's
needed is the DNA that codes for the desired protein!

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
