antibodies

Datasheet for ABIN3095913 TMED2 Protein (AA 21-168) (His tag)

Overview

Uverview			
Quantity:	1 mg		
Target:	TMED2		
Protein Characteristics:	AA 21-168		
Origin:	Human		
Source:	Escherichia coli (E. coli)		
Protein Type:	Recombinant		
Purification tag / Conjugate:	This TMED2 protein is labelled with His tag.		
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)		
Product Details			
Sequence:	YFVSIDAHAE ECFFERVTSG TKMGLIFEVA EGGFLDIDVE ITGPDNKGIY KGDRESSGKY		
	TFAAHMDGTY KFCFSNRMST MTPKIVMFTI DIGEAPKGQD METEAHQNKL EEMINELAVA		
	MTAVKHEQEY MEVRERIHRA INDNTNSR		
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a		
	special request, please contact us.		
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human TMED2 Protein (raised in E. Coli) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis). 		
	This protein is a made to order protein and will be made for the first time for your order. Our		
	This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

	made proteins from other companies is that there is no financial obligation in case the protein	
	cannot be expressed or purified.	
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything	
	(other companies might charge you for any performed steps in the expression process for	
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression	
	experiments or purification optimization).	
	When you order this made-to-order protein you will only pay upon receival of the correctly	
	folded protein. With no financial risk on your end you can rest assured that our experienced	
	protein experts will do everything to make sure that you receive the protein you ordered.	
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.	
	The protein's absorbance will be measured in several dilutions and is measured against its	
	specific reference buffer.	
	The concentration of the protein is calculated using its specific absorption coefficient. We use	
	the Expasy's protparam tool to determine the absorption coefficient of each protein.	
Purification:	Two step purification of proteins expressed in bacterial culture:	
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE. 	
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.	
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.	
Sterility:	0.22 µm filtered	
Endotoxin Level:	Endotoxin has not been removed. Please contact us if you require endotoxin removal.	
Grade:	Crystallography grade	
Target Details		
Target:	TMED2	
Alternative Name:	TMED2 (TMED2 Products)	
Background:	Involved in vesicular protein trafficking. Mainly functions in the early secretory pathway but also	
	in post-Golgi membranes. Thought to act as cargo receptor at the lumenal side for	
	incorporation of secretory cargo molecules into transport vesicles and to be involved in vesicle

	involved in the transport of GPI-anchored proteins and proposed to act together with TMED10	
	as their cargo receptor, the function specifically implies SEC24C and SEC24D of the COPII	
	vesicle coat and lipid raft-like microdomains of the ER. Recognizes GPI anchors structural	
	remodeled in the ER by PGAP1 and MPPE1. In COPI vesicle-mediated retrograde transport	
	inhibits the GTPase-activating activity of ARFGAP1 towards ARF1 thus preventing immature	
	uncoating and allowing cargo selection to take place. Involved in trafficking of G protein-	
	coupled receptors (GPCRs). Regulates F2RL1, OPRM1 and P2RY4 exocytic trafficking from the	
	Golgi to the plasma membrane thus contributing to receptor resensitization. Facilitates CASR	
	maturation and stabilization in the early secretory pathway and increases CASR plasma	
	membrane targeting. Proposed to be involved in organization of intracellular membranes such	
	as the maintenance of the Golgi apparatus. May also play a role in the biosynthesis of secreted	
	cargo such as eventual processing. {ECO:0000269 PubMed:10761932,
