| Quantity:                                      | 1 mg  |
| Target:  | UBE2S   |
| Protein Characteristics:                       | AA 1-222  |
| Origin:  | Human   |
| Source:  | Escherichia coli (E. coli)  |
| Protein Type:                                  | Recombinant   |
| Purification tag / Conjugate:                  | This UBE2S protein is labelled with His tag.                                  |
| Application:                                   | SDS-PAGE (SDS), Western Blotting (WB), ELISA, Crystallization (Crys)          |

experts in the lab will ensure that you receive a correctly folded protein.

This protein is a made to order protein and will be made for the first time for your order. Our

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

The big advantage of ordering our made-to-order proteins in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

#### Purification:

Two step purification of proteins expressed in bacterial culture:

- In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Endotoxin has not been removed. Please contact us if you require endotoxin removal.

Grade:

Crystallography grade

#### Target Details

| Target:           | UBE2S  |  |
|-------------------|--|--|
| Alternative Name: | UBE2S (UBE2S Products)   |  |
| Background:       | Accepts ubiquitin from the E1 complex and catalyzes its covalent attachment to other protein |  |
|                   | Catalyzes 'Lys-11'-linked polyubiquitination. Acts as an essential factor of the anaphase    |  |
|                   | promoting complex/cyclosome (APC/C), a cell cycle-regulated ubiquitin ligase that controls   |  |

| progression through mitosis. Acts by specifically elongating 'Lys-11'-linked polyubiquitin chains   |
|---|
| initiated by the E2 enzyme UBE2C/UBCH10 on APC/C substrates, enhancing the degradation of           |
| APC/C substrates by the proteasome and promoting mitotic exit. Also acts by elongating              |
| ubiquitin chains initiated by the E2 enzyme UBE2D1/UBCH5 in vitro, it is however unclear            |
| whether UBE2D1/UBCH5 acts as a E2 enzyme for the APC/C in vivo. Also involved in                    |
| ubiquitination and subsequent degradation of VHL, resulting in an accumulation of HIF1A. In         |
| vitro able to promote polyubiquitination using all 7 ubiquitin Lys residues, except 'Lys-48'-linked |
| polyubiquitination. {ECO:0000269 PubMed:16819549, ECO:0000269 PubMed:19820702,                      |
| ECO:0000269 PubMed:19822757, ECO:0000269 PubMed:20061386,   |
| ECO:0000269 PubMed:20622874}.   |
|   |

| Molecular Weight: | 24.8 kDa Including tag.      |
|-------------------|------------------------------|
| UniProt:          | Q16763                       |
| Pathways:         | Ubiquitin Proteasome Pathway |

### **Application Details**

| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies |
|--------------------|---|
|                    | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
|                    | though.   |
| Comment:           | In cases in which it is highly likely that the recombinant protein with the default tag will be   |
|                    | insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to     |
|                    | increase solubility. We will discuss all possible options with you in detail to assure that you   |
|                    | receive your protein of interest.   |
| Restrictions:      | For Research Use only   |

## Handling

| Format:          | Liquid   |
|------------------|--|
| Buffer:          | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer. |
| Handling Advice: | Avoid repeated freeze-thaw cycles.   |
| Storage:         | -80 °C   |
| Storage Comment: | Store at -80°C.  |
| Expiry Date:     | Unlimited (if stored properly)   |
