antibodies

Datasheet for ABIN3096322 FLT1 Protein (AA 781-1338) (His tag)

Overview

Quantity:	1 mg
Target:	FLT1
Protein Characteristics:	AA 781-1338
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This FLT1 protein is labelled with His tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

Sequence:	RKMKRSSSEI KTDYLSIIMD PDEVPLDEQC ERLPYDASKW EFARERLKLG KSLGRGAFGK

Product Details	
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human FLT1 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our
	experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in baculovirus infected SF9 insect cells:
	 In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Protein is endotoxin free.
Grade:	Crystallography grade

Target Details

Target:	FLT1
Alternative Name:	FLT1 (FLT1 Products)
Background:	Tyrosine-protein kinase that acts as a cell-surface receptor for VEGFA, VEGFB and PGF, and
	plays an essential role in the development of embryonic vasculature, the regulation of
	angiogenesis, cell survival, cell migration, macrophage function, chemotaxis, and cancer cell
	invasion. May play an essential role as a negative regulator of embryonic angiogenesis by
	inhibiting excessive proliferation of endothelial cells. Can promote endothelial cell proliferation,
	survival and angiogenesis in adulthood. Its function in promoting cell proliferation seems to be
	cell-type specific. Promotes PGF-mediated proliferation of endothelial cells, proliferation of
	some types of cancer cells, but does not promote proliferation of normal fibroblasts (in vitro).
	Has very high affinity for VEGFA and relatively low protein kinase activity, may function as a
	negative regulator of VEGFA signaling by limiting the amount of free VEGFA and preventing its
	binding to KDR. Likewise, isoforms lacking a transmembrane domain, such as isoform 2,
	isoform 3 and isoform 4, may function as decoy receptors for VEGFA. Modulates KDR signaling
	by forming heterodimers with KDR. Ligand binding leads to the activation of several signaling
	cascades. Activation of PLCG leads to the production of the cellular signaling molecules
	diacylglycerol and inositol 1,4,5-trisphosphate and the activation of protein kinase C. Mediates
	phosphorylation of PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase, leading to
	activation of phosphatidylinositol kinase and the downstream signaling pathway. Mediates
	activation of MAPK1/ERK2, MAPK3/ERK1 and the MAP kinase signaling pathway, as well as of
	the AKT1 signaling pathway. Phosphorylates SRC and YES1, and may also phosphorylate CBL.
	Isoform 1 phosphorylates PLCG. Promotes phosphorylation of AKT1 at 'Ser-473'. Promotes
	phosphorylation of PTK2/FAK1. Isoform 7 has a truncated kinase domain, it increases
	phosphorylation of SRC at 'Tyr-418' by unknown means and promotes tumor cell invasion.

Target Details	
UniProt:	P17948
Pathways:	RTK Signaling, Signaling Events mediated by VEGFR1 and VEGFR2, VEGFR1 Specific Signals
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
Handling	

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
