# Datasheet for ABIN3098083 INSIG2 Protein (AA 1-225) (Strep Tag)

### Overview

Quantity:	1 mg
Target:	INSIG2
Protein Characteristics:	AA 1-225
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This INSIG2 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

## Product Details

Sequence:	MAEGETESPG PKKCGPYISS VTSQSVNLMI RGVVLFFIGV FLALVLNLLQ IQRNVTLFPP
	DVIASIFSSA WWVPPCCGTA SAVIGLLYPC IDRHLGEPHK FKREWSSVMR CVAVFVGINH
	ASAKVDFDNN IQLSLTLAAL SIGLWWTFDR SRSGFGLGVG IAFLATVVTQ LLVYNGVYQY
	TSPDFLYVRS WLPCIFFAGG ITMGNIGRQL AMYECKVIAE KSHQE
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure
	correct folding and modification.
	These proteins are normally active (enzymatically functional) as our customers have

All rights reserved. reported (not tested by us and not guaranteed).

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

• ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to
produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag
	capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

### Product Details

Grade:

Crystallography grade

## Target Details

Target:	INSIG2
Alternative Name:	INSIG2 (INSIG2 Products)
Background:	Insulin-induced gene 2 protein (INSIG-2),FUNCTION: Oxysterol-binding protein that mediates
	feedback control of cholesterol synthesis by controlling both endoplasmic reticulum to Golgi
	transport of SCAP and degradation of HMGCR (PubMed:12242332, PubMed:16606821,
	PubMed:32322062). Acts as a negative regulator of cholesterol biosynthesis by mediating the
	retention of the SCAP-SREBP complex in the endoplasmic reticulum, thereby blocking the
	processing of sterol regulatory element-binding proteins (SREBPs) SREBF1/SREBP1 and
	SREBF2/SREBP2 (PubMed:32322062). Binds oxysterol, including 22-hydroxycholesterol, 24-
	hydroxycholesterol, 25-hydroxycholesterol and 27-hydroxycholesterol, regulating interaction
	with SCAP and retention of the SCAP-SREBP complex in the endoplasmic reticulum
	(PubMed:26160948, PubMed:17428920, PubMed:32322062). In presence of oxysterol, interact
	with SCAP, retaining the SCAP-SREBP complex in the endoplasmic reticulum, thereby
	preventing SCAP from escorting SREBF1/SREBP1 and SREBF2/SREBP2 to the Golgi
	(PubMed:32322062). Sterol deprivation or phosphorylation by PCK1 reduce oxysterol-binding,
	disrupting the interaction between INSIG2 and SCAP, thereby promoting Golgi transport of the
	SCAP-SREBP complex, followed by processing and nuclear translocation of SREBF1/SREBP1
	and SREBF2/SREBP2 (PubMed:32322062). Also regulates cholesterol synthesis by regulating
	degradation of HMGCR: initiates the sterol-mediated ubiquitin-mediated endoplasmic
	reticulum-associated degradation (ERAD) of HMGCR via recruitment of the reductase to the
	ubiquitin ligase RNF139 (PubMed:16606821, PubMed:22143767).
	{EC0:0000269 PubMed:12242332, EC0:0000269 PubMed:16606821,
	ECO:0000269 PubMed:17428920, ECO:0000269 PubMed:22143767,
	ECO:0000269 PubMed:26160948, ECO:0000269 PubMed:32322062}.
Molecular Weight:	24.8 kDa
JniProt:	Q9Y5U4
Pathways:	ER-Nucleus Signaling
Application Details	
	In addition to the applications listed above we expect the protein to work for functional studies

Application Details		
	as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.	
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce	
	even the most difficult-to-express proteins, including those that require post-translational modifications.	
	During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the	
	mitochondria to drive the reaction. During our lysate completion steps, the additional	
	components needed for protein production (amino acids, cofactors, etc.) are added to produce	
	something that functions like a cell, but without the constraints of a living system - all that's	
	needed is the DNA that codes for the desired protein!	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,	
	please contact us.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	
Storage Comment:	Store at -80°C.	
Expiry Date:	Unlimited (if stored properly)
