

Datasheet for ABIN3098122 RFNG Protein (AA 1-331) (Strep Tag)

o to Product page

Overview

Quantity:	1 mg
Target:	RFNG
Protein Characteristics:	AA 1-331
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This RFNG protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA
Product Details	
Sequence:	MSRARGALCR ACLALAAALA ALLLLPLPLP RAPAPARTPA PAPRAPPSRP AAPSLRPDDV
	FIAVKTTRKN HGPRLRLLLR TWISRARQQT FIFTDGDDPE LELQGGDRVI NTNCSAVRTR
	QALCCKMSVE YDKFIESGRK WFCHVDDDNY VNARSLLHLL SSFSPSQDVY LGRPSLDHPI
	EATERVQGGR TVTTVKFWFA TGGAGFCLSR GLALKMSPWA SLGSFMSTAE QVRLPDDCTV
	GYIVEGLLGA RLLHSPLFHS HLENLQRLPP DTLLQQVTLS HGGPENPHNV VNVAGGFSLH
	QDPTRFKSIH CLLYPDTDWC PRQKQGAPTS R
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	 Protein expressed with ALiCE® and purified in one-step affinity chromatography

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

Target Details

Target:	RFNG
Alternative Name:	RFNG (RFNG Products)
Background:	Beta-1,3-N-acetylglucosaminyltransferase radical fringe (EC 2.4.1.222) (O-fucosylpeptide 3-

Target Details

	beta-N-acetylglucosaminyltransferase),FUNCTION: Glycosyltransferase that initiates the
	elongation of O-linked fucose residues attached to EGF-like repeats in the extracellular domain
	of Notch molecules. Modulates NOTCH1 activity by modifying O-fucose residues at specific
	EGF-like domains resulting in enhancement of NOTCH1 activation by DLL1 and JAG1. May be
	involved in limb formation and in neurogenesis. {ECO:0000250 UniProtKB:009009,
	ECO:0000250 UniProtKB:012972, ECO:0000250 UniProtKB:Q9R1U9}.
Molecular Weight:	36.4 kDa
UniProt:	Q9Y644
Pathways:	Notch Signaling

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
