Claudin 18 Protein (CLDN18) (AA 1-261) (Strep Tag)

Image

Overview

Quantity:	1 mg
Target:	Claudin 18 (CLDN18)
Protein Characteristics:	AA 1-261
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This Claudin 18 protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

Product Details

Sequence:

MSTTTCQVVA FLLSILGLAG CIAATGMDMW STQDLYDNPV TSVFQYEGLW RSCVRQSSGF
TECRPYFTIL GLPAMLQAVR ALMIVGIVLG AIGLLVSIFA LKCIRIGSME DSAKANMTLT
SGIMFIVSGL CAIAGVSVFA NMLVTNFWMS TANMYTGMGG MVQTVQTRYT FGAALFVGWV
AGGLTLIGGV MMCIACRGLA PEETNYKAVS YHASGHSVAY KPGGFKASTG FGSNTKNKKI
YDGGARTEDE VQSYPSKHDY V

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.

- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Endotoxin Level:

Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Grade:	Crystallography grade
Target Details	
Target:	Claudin 18 (CLDN18)
Alternative Name:	CLDN18 (CLDN18 Products)
Background:	Claudin-18,FUNCTION: Involved in alveolar fluid homeostasis via regulation of alveolar epithelia
	tight junction composition and therefore ion transport and solute permeability, potentially via
	downstream regulation of the actin cytoskeleton organization and beta-2-adrenergic signaling
	(By similarity). Required for lung alveolarization and maintenance of the paracellular alveolar
	epithelial barrier (By similarity). Acts to maintain epithelial progenitor cell proliferation and orga
	size, via regulation of YAP1 localization away from the nucleus and thereby restriction of YAP1
	target gene transcription (By similarity). Acts as a negative regulator of RANKL-induced
	osteoclast differentiation, potentially via relocation of TJP2/ZO-2 away from the nucleus,
	subsequently involved in bone resorption in response to calcium deficiency (By similarity).
	Mediates the osteoprotective effects of estrogen, potentially via acting downstream of estroge
	signaling independently of RANKL signaling pathways (By similarity).
	{ECO:0000250 UniProtKB:P56857}., FUNCTION: [Isoform A1]: Involved in the maintenance of
	homeostasis of the alveolar microenvironment via regulation of pH and subsequent T-cell
	activation in the alveolar space, is therefore indirectly involved in limiting C. neoformans
	infection. {ECO:0000250 UniProtKB:P56857}., FUNCTION: [Isoform A2]: Required for the
	formation of the gastric paracellular barrier via its role in tight junction formation, thereby
	involved in the response to gastric acidification. {ECO:0000250 UniProtKB:P56857}.
Molecular Weight:	27.9 kDa
UniProt:	P56856
Pathways:	Cell-Cell Junction Organization, Hepatitis C
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce

even the most difficult-to-express proteins, including those that require post-translational

modifications.

During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
