antibodies

Datasheet for ABIN3103253 MMGT1 Protein (AA 1-131) (Strep Tag)

Overview

Quantity:	1 mg
Target:	MMGT1
Protein Characteristics:	AA 1-131
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MMGT1 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)
Product Details	
Sequence:	MAPSLWKGLV GIGLFALAHA AFSAAQHRSY MRLTEKEDES LPIDIVLQTL LAFAVTCYGI
	VHIAGEFKDM DATSELKNKT FDTLRNHPSF YVFNHRGRVL FRPSDTANSS NQDALSSNTS
	LKLRKLESLR R

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).

All rights reserved. • State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target:	MMGT1
Alternative Name:	MMGT1 (MMGT1 Products)
Background:	ER membrane protein complex subunit 5 (Membrane magnesium transporter 1)
	(Transmembrane protein 32),FUNCTION: Part of the endoplasmic reticulum membrane proteir
	complex (EMC) that enables the energy-independent insertion into endoplasmic reticulum
	membranes of newly synthesized membrane proteins (PubMed:30415835, PubMed:29809151
	PubMed:29242231, PubMed:32459176, PubMed:32439656). Preferentially accommodates
	proteins with transmembrane domains that are weakly hydrophobic or contain destabilizing
	features such as charged and aromatic residues (PubMed:30415835, PubMed:29809151,
	PubMed:29242231). Involved in the cotranslational insertion of multi-pass membrane proteins
	in which stop-transfer membrane-anchor sequences become ER membrane spanning helices
	(PubMed:30415835, PubMed:29809151). It is also required for the post-translational insertion
	of tail-anchored/TA proteins in endoplasmic reticulum membranes (PubMed:29809151,
	PubMed:29242231). By mediating the proper cotranslational insertion of N-terminal
	transmembrane domains in an N-exo topology, with translocated N-terminus in the lumen of
	the ER, controls the topology of multi-pass membrane proteins like the G protein-coupled
	receptors (PubMed:30415835). By regulating the insertion of various proteins in membranes, it
	is indirectly involved in many cellular processes (By similarity). May be involved in Mg(2+)
	transport (By similarity). {ECO:0000250 UniProtKB:Q8K273, ECO:0000269 PubMed:29242231,
	ECO:0000269 PubMed:29809151, ECO:0000269 PubMed:30415835,
	EC0:0000269 PubMed:32439656, EC0:0000269 PubMed:32459176}.
Molecular Weight:	14.7 kDa
UniProt:	Q8N4V1
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.

Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C

Expiry Date: Unlimited (if stored properly)

Store at -80°C.
