# Datasheet for ABIN3105900 Selenoprotein S Protein (SELS) (AA 1-189) (Strep Tag)

Overview

Image

Quantity:	1 mg
Target:	Selenoprotein S (SELS)
Protein Characteristics:	AA 1-189
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This Selenoprotein S protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)
Product Details	
Sequence:	MERQEESLSA RPALETEGLR FLHTTVGSLL ATYGWYIVFS CILLYVVFQK LSARLRALRQ
	RQLDRAAAAV EPDVVVKRQE ALAAARLKMQ EELNAQVEKH KEKLKQLEEE KRRQKIEMWD
	SMQEGKSYKG NAKKPQEEDS PGPSTSSVLK RKSDRKPLRG GGYNPLSGEG GGACSWRPGR
	RGPSSGGUG
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- · These proteins are normally active (enzymatically functional) as our customers have

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

• ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to
produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System
	(ALICE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag
	capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and
	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

## Product Details

### Grade:

Crystallography grade

# Target Details

Target:	Selenoprotein S (SELS)
Alternative Name:	SELENOS (SELS Products)
Background:	Selenoprotein S (SeIS) (VCP-interacting membrane protein),FUNCTION: Involved in the
	degradation process of misfolded endoplasmic reticulum (ER) luminal proteins. Participates ir
	the transfer of misfolded proteins from the ER to the cytosol, where they are destroyed by the
	proteasome in a ubiquitin-dependent manner. Probably acts by serving as a linker between
	DERL1, which mediates the retrotranslocation of misfolded proteins into the cytosol, and the
	ATPase complex VCP, which mediates the translocation and ubiquitination.
	{ECO:0000269 PubMed:15215856}.
Molecular Weight:	21.2 kDa
UniProt:	Q9BQE4
Pathways:	Cellular Response to Molecule of Bacterial Origin, ER-Nucleus Signaling, Regulation of
	Carbohydrate Metabolic Process, Cell RedoxHomeostasis, Negative Regulation of intrinsic
	apoptotic Signaling, SARS-CoV-2 Protein Interactome

## Application Details

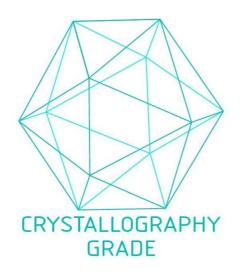

### Restrictions:

For Research Use only

# Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
