antibodies

Datasheet for ABIN3109888 ABCC3 Protein (AA 1-1527) (Strep Tag)

Overview

Quantity:	1 mg
Target:	ABCC3
Protein Characteristics:	AA 1-1527
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This ABCC3 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA

Product Details

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

 ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/5 | Product datasheet for ABIN3109888 | 04/17/2024 | Copyright antibodies-online. All rights reserved.

	 During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
	Concentration:
	 The concentration of our recombinant proteins is measured using the absorbance at 280nm. The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
	• We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.
Purification:	Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):
	1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
	2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade

Target Details

Target:	ABCC3
Alternative Name:	ABCC3 (ABCC3 Products)
Background:	ATP-binding cassette sub-family C member 3 (EC 7.6.2) (EC 7.6.2.2) (EC 7.6.2.3) (Canalicular
	multispecific organic anion transporter 2) (Multi-specific organic anion transporter D) (MOAT-D)
	(Multidrug resistance-associated protein 3),FUNCTION: ATP-dependent transporter of the ATP-
	binding cassette (ABC) family that binds and hydrolyzes ATP to enable active transport of
	various substrates including many drugs, toxicants and endogenous compound across cell
	membranes (PubMed:11581266, PubMed:15083066, PubMed:10359813). Transports
	glucuronide conjugates such as bilirubin diglucuronide, estradiol-17-beta-o-glucuronide and

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/5 | Product datasheet for ABIN3109888 | 04/17/2024 | Copyright antibodies-online. All rights reserved.

	GSH conjugates such as leukotriene C4 (LTC4) (PubMed:15083066, PubMed:11581266).
	Transports also various bile salts (taurocholate, glycocholate, taurochenodeoxycholate-3-
	sulfate, taurolithocholate- 3-sulfate) (By similarity). Does not contribute substantially to bile salt
	physiology but provides an alternative route for the export of bile acids and glucuronides from
	cholestatic hepatocytes (By similarity). May contribute to regulate the transport of organic
	compounds in testes across the blood-testis-barrier (Probable). Can confer resistance to
	various anticancer drugs, methotrexate, tenoposide and etoposide, by decreasing accumulation
	of these drugs in cells (PubMed:11581266, PubMed:10359813).
	{ECO:0000250 UniProtKB:088563, ECO:0000269 PubMed:10359813,
	ECO:0000269 PubMed:11581266, ECO:0000269 PubMed:15083066,
	ECO:0000305 PubMed:35307651}.
Molecular Weight:	169.3 kDa
UniProt:	015438
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request,
