Datasheet for ABIN3110810 SLC22A3 Protein (AA 1-556) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SLC22A3 (OCT3)
Protein Characteristics:	AA 1-556
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SLC22A3 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALICE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and

	Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade
Target Details	
Target:	SLC22A3 (OCT3)
Alternative Name:	SLC22A3 (OCT3 Products)
Background:	Solute carrier family 22 member 3 (Extraneuronal monoamine transporter) (EMT) (Organic
	cation transporter 3) (OCT3),FUNCTION: Electrogenic voltage-dependent transporter that
	mediates the transport of a variety of organic cations such as endogenous bioactive amines,
	cationic drugs and xenobiotics (PubMed:10196521, PubMed:10966924, PubMed:12538837,
	PubMed:17460754, PubMed:20858707). Cation cellular uptake or release is driven by the
	electrochemical potential, i.e. membrane potential and concentration gradient
	(PubMed:10966924). Functions as a Na(+)- and Cl(-)-independent, bidirectional uniporter
	(PubMed:12538837). Implicated in monoamine neurotransmitters uptake such as dopamine,
	adrenaline/epinephrine, noradrenaline/norepinephrine, histamine, serotonin and tyramine,
	thereby supporting a role in homeostatic regulation of aminergic neurotransmission in the bra
	(PubMed:10196521, PubMed:16581093, PubMed:20858707). Transports dopaminergic
	neuromodulators cyclo(his-pro) and salsolinol with low efficiency (PubMed:17460754). May be
	involved in the uptake and disposition of cationic compounds by renal clearance from the bloc
	flow (PubMed:10966924). May contribute to regulate the transport of cationic compounds in
	testis across the blood-testis-barrier (Probable). Mediates the transport of polyamine
	spermidine and putrescine (By similarity). Mediates the bidirectional transport of polyamine
	agmatine (PubMed:12538837). Also transports guanidine (PubMed:10966924). May also
	mediate intracellular transport of organic cations, thereby playing a role in amine metabolism
	and intracellular signaling (By similarity). {ECO:0000250 UniProtKB:088446,
	EC0:0000269 PubMed:10196521, EC0:0000269 PubMed:10966924,

Target Details	
UniProt:	075751
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions: Handling	For Research Use only
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
