antibodies

## Datasheet for ABIN3111643 HLA-DQA1 Protein (AA 24-254) (rho-1D4 tag)

Overview

Image

| Quantity:                     | 1 mg   |
|-------------------------------|--|
| Target:                       | HLA-DQA1   |
| Protein Characteristics:      | AA 24-254  |
| Origin:                       | Human  |
| Source:                       | Insect Cells   |
| Protein Type:                 | Recombinant  |
| Purification tag / Conjugate: | This HLA-DQA1 protein is labelled with rho-1D4 tag.                  |
| Application:                  | SDS-PAGE (SDS), ELISA, Western Blotting (WB), Crystallization (Crys) |

## Product Details

| Sequence:        | EDIVADHVAS YGVNLYQSYG PSGQYTHEFD GDEQFYVDLG RKETVWCLPV LRQFRFDPQF                               |
|------------------|---|
|                  | ALTNIAVLKH NLNSLIKRSN STAATNEVPE VTVFSKSPVT LGQPNILICL VDNIFPPVVN                               |
|                  | ITWLSNGHSV TEGVSETSFL SKSDHSFFKI SYLTLLPSAE ESYDCKVEHW GLDKPLLKHW                               |
|                  | EPEIPAPMSE LTETVVCALG LSVGLVGIVV GTVFIIRGLR SVGASRHQGP L  |
|                  | Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a      |
|                  | special request, please contact us.   |
| Characteristics: | Made in Germany - from design to production - by highly experienced protein experts.            |
|                  | Human HLA-DQA1 Protein (raised in Insect Cells) purified by multi-step, protein-specific        |
|                  | process to ensure crystallization grade.  |
|                  | State-of-the-art algorithm used for plasmid design (Gene synthesis).                            |
|                  | This protein is a made to order protein and will be made for the first time for your order. Our |
|                  | experts in the lab will ensure that you receive a correctly folded protein.                     |
|                  |   |

|                   | The big advantage of ordering our made-to-order proteins in comparison to ordering custom<br>made proteins from other companies is that there is no financial obligation in case the protein<br>cannot be expressed or purified.<br>In the unlikely event that the protein cannot be expressed or purified we do not charge anything<br>(other companies might charge you for any performed steps in the expression process for<br>custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression<br>experiments or purification optimization).<br>When you order this made-to-order protein you will only pay upon receival of the correctly<br>folded protein. With no financial risk on your end you can rest assured that our experienced<br>protein experts will do everything to make sure that you receive the protein you ordered. |
|-------------------|--|
|                   | The concentration of our recombinant proteins is measured using the absorbance at 280nm.<br>The protein's absorbance will be measured in several dilutions and is measured against its<br>specific reference buffer.<br>The concentration of the protein is calculated using its specific absorption coefficient. We use<br>the Expasy's protparam tool to determine the absorption coefficient of each protein.   |
| Purification:     | <ul> <li>Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:</li> <li>1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.</li> <li>2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.</li> <li>3. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ul>  |
| Purity:           | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.   |
| Sterility:        | 0.22 µm filtered   |
| Endotoxin Level:  | Protein is endotoxin-free.   |
| Grade:            | Crystallography grade  |
| Target Details    |  |
| Target:           | HLA-DQA1   |
| Alternative Name: | HLA-DQA1 (HLA-DQA1 Products)   |
| Background:       | Binds peptides derived from antigens that access the endocytic route of antigen presenting   |

| cells (APC) and presents them on the cell surface for recognition by the CD4 T-cells. The        |
|--|
| peptide binding cleft accommodates peptides of 10-30 residues. The peptides presented by         |
| MHC class II molecules are generated mostly by degradation of proteins that access the           |
| endocytic route, where they are processed by lysosomal proteases and other hydrolases.           |
| Exogenous antigens that have been endocytosed by the APC are thus readily available for          |
| presentation via MHC II molecules, and for this reason this antigen presentation pathway is      |
| usually referred to as exogenous. As membrane proteins on their way to degradation in            |
| lysosomes as part of their normal turn-over are also contained in the endosomal/lysosomal        |
| compartments, exogenous antigens must compete with those derived from endogenous                 |
| components. Autophagy is also a source of endogenous peptides, autophagosomes                    |
| constitutively fuse with MHC class II loading compartments. In addition to APCs, other cells of  |
| the gastrointestinal tract, such as epithelial cells, express MHC class II molecules and CD74    |
| and act as APCs, which is an unusual trait of the GI tract. To produce a MHC class II molecule   |
| that presents an antigen, three MHC class II molecules (heterodimers of an alpha and a beta      |
| chain) associate with a CD74 trimer in the ER to form a heterononamer. Soon after the entry of   |
| this complex into the endosomal/lysosomal system where antigen processing occurs, CD74           |
| undergoes a sequential degradation by various proteases, including CTSS and CTSL, leaving a      |
| small fragment termed CLIP (class-II-associated invariant chain peptide). The removal of CLIP    |
| is facilitated by HLA-DM via direct binding to the alpha-beta-CLIP complex so that CLIP is       |
| released. HLA-DM stabilizes MHC class II molecules until primary high affinity antigenic         |
| peptides are bound. The MHC II molecule bound to a peptide is then transported to the cell       |
| membrane surface. In B-cells, the interaction between HLA-DM and MHC class II molecules is       |
| regulated by HLA-DO. Primary dendritic cells (DCs) also to express HLA-DO. Lysosomal             |
| microenvironment has been implicated in the regulation of antigen loading into MHC II            |
| molecules, increased acidification produces increased proteolysis and efficient peptide loading. |

| Molecular Weight: | 26.7 kDa Including tag.  |
|-------------------|--|
| UniProt:          | P01909   |
| Pathways:         | TCR Signaling, Cancer Immune Checkpoints, Human Leukocyte Antigen (HLA) in Adaptive<br>Immune Response |

## Application Details

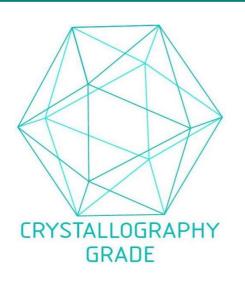

| Application Notes: | In addition to the applications listed above we expect the protein to work for functional studies |
|--------------------|---|
|                    | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
|                    | though.   |

| Application Details |  |
|---------------------|--|
| Comment:            | In cases in which it is highly likely that the recombinant protein with the default tag will be<br>insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to<br>increase solubility. We will discuss all possible options with you in detail to assure that you<br>receive your protein of interest. |
| Restrictions:       | For Research Use only  |
| Handling            |  |
| Format:             | Liquid   |

| Format:          | Liquid   |
|------------------|--|
| Buffer:          | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer. |
| Handling Advice: | Avoid repeated freeze-thaw cycles.   |
| Storage:         | -80 °C   |
| Storage Comment: | Store at -80°C.  |
| Expiry Date:     | Unlimited (if stored properly)   |
