

Datasheet for ABIN3113298 HTR2A Protein (AA 1-471) (Strep Tag)

Overview

00000000	
Quantity:	1 mg
Target:	HTR2A
Protein Characteristics:	AA 1-471
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This HTR2A protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA
Product Details	
Sequence:	MDILCEENTS LSSTTNSLMQ LNDDTRLYSN DFNSGEANTS DAFNWTVDSE NRTNLSCEGC
	LSPSCLSLLH LQEKNWSALL TAVVIILTIA GNILVIMAVS LEKKLQNATN YFLMSLAIAD

	SSQLQMGQKK NSKQDAKTTD NDCSMVALGK QHSEEASKDN SDGVNEKVSC V

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

- · Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Product Details

Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)

Target Details

arget:	HTR2A
Alternative Name:	HTR2A (HTR2A Products)
Background:	5-hydroxytryptamine receptor 2A (5-HT-2) (5-HT-2A) (Serotonin receptor 2A),FUNCTION: G-
	protein coupled receptor for 5-hydroxytryptamine (serotonin) (PubMed:1330647,
	PubMed:18703043, PubMed:19057895). Also functions as a receptor for various drugs and
	psychoactive substances, including mescaline, psilocybin, 1-(2,5-dimethoxy-4-iodophenyl)-2-
	aminopropane (DOI) and lysergic acid diethylamide (LSD) (PubMed:28129538). Ligand binding
	causes a conformation change that triggers signaling via guanine nucleotide-binding proteins
	(G proteins) and modulates the activity of down-stream effectors (PubMed:28129538). Beta-
	arrestin family members inhibit signaling via G proteins and mediate activation of alternative
	signaling pathways (PubMed:28129538). Signaling activates phospholipase C and a
	phosphatidylinositol-calcium second messenger system that modulates the activity of
	phosphatidylinositol 3-kinase and promotes the release of Ca(2+) ions from intracellular store
	(PubMed:18703043, PubMed:28129538). Affects neural activity, perception, cognition and
	mood (PubMed:18297054). Plays a role in the regulation of behavior, including responses to
	anxiogenic situations and psychoactive substances. Plays a role in intestinal smooth muscle
	contraction, and may play a role in arterial vasoconstriction. {ECO:0000269 PubMed:1330647,
	ECO:0000269 PubMed:18297054, ECO:0000269 PubMed:18703043,
	ECO:0000269 PubMed:19057895, ECO:0000269 PubMed:21645528,
	EC0:0000269 PubMed:22300836, EC0:0000269 PubMed:28129538}., FUNCTION: (Microbial
	infection) Acts as a receptor for human JC polyomavirus/JCPyV.
	{ECO:0000269 PubMed:24089568}.
Aolecular Weight:	52.6 kDa
JniProt:	P28223
	JAK-STAT Signaling, Inositol Metabolic Process, Regulation of Carbohydrate Metabolic Proce

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a

Handling	

- Tarlaning	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
