Datasheet for ABIN3113428 ABCD1 Protein (AA 1-745) (Strep Tag)

Overview

Quantity:	1 mg
Target:	ABCD1
Protein Characteristics:	AA 1-745
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This ABCD1 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Sequence:	MPVLSRPRPW RGNTLKRTAV LLALAAYGAH KVYPLVRQCL APARGLQAPA GEPTQEASGV

GEAVAPAHVP APSPQGPGGL QGAST

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics: Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein. The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System

	(ALiCE®):
	 In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE. Protein containing fractions of the best purification are subjected to second purification step
	through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade
Target Details	
Target:	ABCD1
Alternative Name:	ABCD1 (ABCD1 Products)
Background:	ATP-binding cassette sub-family D member 1 (EC 3.1.2) (EC 7.6.2) (Adrenoleukodystrophy
	protein) (ALDP),FUNCTION: ATP-dependent transporter of the ATP-binding cassette (ABC)
	family involved in the transport of very long chain fatty acid (VLCFA)-CoA from the cytosol to
	the peroxisome lumen (PubMed:11248239, PubMed:15682271, PubMed:16946495,
	PubMed:18757502, PubMed:21145416, PubMed:23671276, PubMed:29397936,
	PubMed:33500543). Coupled to the ATP-dependent transporter activity has also a fatty acyl-
	CoA thioesterase activity (ACOT) and hydrolyzes VLCFA-CoA into VLCFA prior their ATP-
	dependent transport into peroxisomes, the ACOT activity is essential during this transport
	process (PubMed:33500543, PubMed:29397936). Thus, plays a role in regulation of VLCFAs
	and energy metabolism namely, in the degradation and biosynthesis of fatty acids by beta-
	oxidation, mitochondrial function and microsomal fatty acid elongation (PubMed:23671276,
	PubMed:21145416). Involved in several processes, namely, controls the active myelination
	phase by negatively regulating the microsomal fatty acid elongation activity and may also play
	a role in axon and myelin maintenance. Controls also the cellular response to oxidative stress
	by regulating mitochondrial functions such as mitochondrial oxidative phosphorylation and
	depolarization. And finally controls the inflammatory response by positively regulating
	peroxisomal beta-oxidation of VLCFAs (By similarity). {ECO:0000250 UniProtKB:P48410,
	ECO:0000269 PubMed:11248239, ECO:0000269 PubMed:15682271,

Target Details	
Molecular Weight:	82.9 kDa
UniProt:	P33897
Pathways:	Monocarboxylic Acid Catabolic Process
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	 ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications. During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
