Datasheet for ABIN3113706 KCNJ5 Protein (AA 1-419) (Strep Tag)

Overview

Quantity:	1 mg
Target:	KCNJ5
Protein Characteristics:	AA 1-419
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This KCNJ5 protein is labelled with Strep Tag.
Application:	Western Blotting (WB), ELISA, SDS-PAGE (SDS)

Product Details

Sequence:	MAGDSRNAMN QDMEIGVTPW DPKKIPKQAR DYVPIATDRT RLLAEGKKPR QRYMEKSGKC
	NVHHGNVQET YRYLSDLFTT LVDLKWRFNL LVFTMVYTVT WLFFGFIWWL IAYIRGDLDH
	VGDQEWIPCV ENLSGFVSAF LFSIETETTI GYGFRVITEK CPEGIILLLV QAILGSIVNA
	FMVGCMFVKI SQPKKRAETL MFSNNAVISM RDEKLCLMFR VGDLRNSHIV EASIRAKLIK
	SRQTKEGEFI PLNQTDINVG FDTGDDRLFL VSPLIISHEI NQKSPFWEMS QAQLHQEEFE
	VVVILEGMVE ATGMTCQARS SYMDTEVLWG HRFTPVLTLE KGFYEVDYNT FHDTYETNTP
	SCCAKELAEM KREGRLLQYL PSPPLLGGCA EAGLDAEAEQ NEEDEPKGLG GSREARGSV
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:

- · Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Product Details		
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.	
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)	
Grade:	Crystallography grade	
Target Details		
Target:	KCNJ5	
Alternative Name:	KCNJ5 (KCNJ5 Products)	
Background:	G protein-activated inward rectifier potassium channel 4 (GIRK-4) (Cardiac inward rectifier) (CIR) (Heart KATP channel) (Inward rectifier K(+) channel Kir3.4) (IRK-4) (KATP-1) (Potassium channel, inwardly rectifying subfamily J member 5),FUNCTION: This potassium channel is controlled by G proteins. Inward rectifier potassium channels are characterized by a greater tendency to allow potassium to flow into the cell rather than out of it. Their voltage dependence is regulated by the concentration of extracellular potassium, as external potassium is raised, the voltage range of the channel opening shifts to more positive voltages. The inward rectification is mainly due to the blockage of outward current by internal magnesium. Can be blocked by external barium. {ECO:0000269 PubMed:22315453, ECO:0000269 PubMed:22628607, ECO:0000269 PubMed:24037882, ECO:0000269 PubMed:27099398, ECO:0000269 PubMed:27293068}.	
Molecular Weight:	47.7 kDa	
UniProt:	P48544	
Pathways:	Notch Signaling	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional stud as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.

Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
