Datasheet for ABIN3114191 SLC7A9 Protein (AA 1-487) (Strep Tag)

Overview

Quantity:	1 mg
Target:	SLC7A9
Protein Characteristics:	AA 1-487
Origin:	Human
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SLC7A9 protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

- · Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALICE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

- 1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag capture material. Eluate fractions are analyzed by SDS-PAGE.
- Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Product Details	
Purity:	>80 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level:	Low Endotoxin less than 1 EU/mg (< 0.1 ng/mg)
Grade:	Crystallography grade
Target Details	
Target:	SLC7A9
Alternative Name:	SLC7A9 (SLC7A9 Products)
Background:	B(0,+)-type amino acid transporter 1 (b(0,+)AT1) (Glycoprotein-associated amino acid
	transporter b0,+AT1) (Solute carrier family 7 member 9),FUNCTION: Associates with SLC3A1 to
	form a functional transporter complex that mediates the electrogenic exchange between
	cationic amino acids and neutral amino acids, with a stoichiometry of 1:1 (PubMed:8663357,
	PubMed:16825196, PubMed:32817565, PubMed:32494597). Has system b(0,+)-like activity
	with high affinity for extracellular cationic amino acids and L-cystine and lower affinity for
	intracellular neutral amino acids (PubMed:8663357, PubMed:16825196, PubMed:32494597).
	Substrate exchange is driven by high concentration of intracellular neutral amino acids and the
	intracellular reduction of L-cystine to L-cysteine (PubMed:8663357). Required for reabsorption
	of L-cystine and dibasic amino acids across the brush border membrane in renal proximal
	tubules. {EC0:0000269 PubMed:10471498, EC0:0000269 PubMed:10588648,
	ECO:0000269 PubMed:16609684, ECO:0000269 PubMed:16825196,
	EC0:0000269 PubMed:32494597, EC0:0000269 PubMed:32817565,
	EC0:0000269 PubMed:8663357}.
Molecular Weight:	53.5 kDa
UniProt:	P82251
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	$\operatorname{ALiCE}_{\ensuremath{\mathbb{B}}}$, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.

Application Details

During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to produce
something that functions like a cell, but without the constraints of a living system - all that's
needed is the DNA that codes for the desired protein!

Restrictions:

For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
