## Datasheet for ABIN3115595 ERVK-6 Protein (AA 90-465) (rho-1D4 tag)

Overview

Quantity:	1 mg
Target:	ERVK-6
Protein Characteristics:	AA 90-465
Origin:	Human
Source:	Insect Cells
Protein Type:	Recombinant
Purification tag / Conjugate:	This ERVK-6 protein is labelled with rho-1D4 tag.
Application:	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

## Product Details

Sequence:	LPMPAGAAAA NYTYWAYVPF PPLIRAVTWM DNPTEVYVND SVWVPGPIDD RCPAKPEEEG
	MMINISIGYH YPPICLGRAP GCLMPAVQNW LVEVPTVSPI CRFTYHMVSG MSLRPRVNYL
	QDFSYQRSLK FRPKGKPCPK EIPKESKNTE VLVWEECVAN SAVILQNNEF GTIIDWAPRG
	QFYHNCSGQT QSCPSAQVSP AVDSDLTESL DKHKHKKLQS FYPWEWGEKG ISTPRPKIVS
	PVSGPEHPEL WRLTVASHHI RIWSGNQTLE TRDRKPFYTI DLNSSLTVPL QSCVKPPYML
	VVGNIVIKPD SQTITCENCR LLTCIDSTFN WQHRILLVRA REGVWIPVSM DRPWEASPSV
	HILTEVLKGV LNRSKR
	Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a
	special request, please contact us.
Characteristics:	<ul> <li>Made in Germany - from design to production - by highly experienced protein experts.</li> <li>Human ERVK-6 Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade.</li> </ul>

	State-of-the-art algorithm used for plasmid design (Gene synthesis).
	This protein is a made to order protein and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom
	made proteins from other companies is that there is no financial obligation in case the protein
	cannot be expressed or purified.
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything
	(other companies might charge you for any performed steps in the expression process for
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression
	experiments or purification optimization).
	When you order this made-to-order protein you will only pay upon receival of the correctly
	folded protein. With no financial risk on your end you can rest assured that our experienced
	protein experts will do everything to make sure that you receive the protein you ordered.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer.
	The concentration of the protein is calculated using its specific absorption coefficient. We use
	the Expasy's protparam tool to determine the absorption coefficient of each protein.
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.
	<ol> <li>The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.</li> </ol>
	3. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 μm filtered
Endotoxin Level:	Protein is endotoxin-free.
Grade:	Crystallography grade

## Target Details

Target:	ERVK-6
Alternative Name:	ERVK-6 (ERVK-6 Products)
Background:	Retroviral envelope proteins mediate receptor recognition and membrane fusion during early infection. Endogenous envelope proteins may have kept, lost or modified their original function during evolution. This endogenous envelope protein has lost its original fusogenic properties. {ECO:0000269 PubMed:14557543}., SU mediates receptor recognition. {ECO:0000250}., TM anchors the envelope heterodimer to the viral membrane through one transmembrane domain The other hydrophobic domain, called fusion peptide, mediates fusion of the viral membrane with the target cell membrane (By similarity). {ECO:0000250}.
Molecular Weight:	43.8 kDa Including tag.
UniProt:	Q69384
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee

In cases in which it is highly likely that the recombinant protein with the default tag will be

insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to

increase solubility. We will discuss all possible options with you in detail to assure that you

though.

receive your protein of interest.

For Research Use only

## Handling

Restrictions:

Comment:

Format:	Liquid
Formal.	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
