Datasheet for ABIN3119500 Corin Protein (AA 165-801) (rho-1D4 tag)

Overview

Quantity:	1 mg	
Target:	Corin (CORIN)	
Protein Characteristics:	AA 165-801	
Origin:	Human	
Source:	Insect Cells	
Protein Type:	Recombinant	
Purification tag / Conjugate:	This Corin protein is labelled with rho-1D4 tag.	
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA, Crystallization (Crys)

Product Details

	special request, please contact us.	
Characteristics:	 Made in Germany - from design to production - by highly experienced protein experts. Human CORIN Protein (raised in Insect Cells) purified by multi-step, protein-specific process to ensure crystallization grade. State-of-the-art algorithm used for plasmid design (Gene synthesis). 	
	This protein is a made to order protein and will be made for the first time for your order. Our	
	experts in the lab will ensure that you receive a correctly folded protein.	
	The big advantage of ordering our made-to-order proteins in comparison to ordering custom	
	made proteins from other companies is that there is no financial obligation in case the protein	
	cannot be expressed or purified.	
	In the unlikely event that the protein cannot be expressed or purified we do not charge anything	
	(other companies might charge you for any performed steps in the expression process for	
	custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression	
	experiments or purification optimization).	
	When you order this made-to-order protein you will only pay upon receival of the correctly	
	folded protein. With no financial risk on your end you can rest assured that our experienced	
	protein experts will do everything to make sure that you receive the protein you ordered.	
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.	
	The protein's absorbance will be measured in several dilutions and is measured against its	
	specific reference buffer.	
	The concentration of the protein is calculated using its specific absorption coefficient. We use	
	the Expasy's protparam tool to determine the absorption coefficient of each protein.	
Purification:	Three step purification of membrane proteins expressed in baculovirus infected SF9 insect	
	cells:	
	1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.	
	2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.	
	 Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot. 	
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.	
Sterility:	0.22 µm filtered	
Endotoxin Level:	Protein is endotoxin-free.

Product Details

Grade:

Crystallography grade

Target Details

Target:	Corin (CORIN)		
Alternative Name:	CORIN (CORIN Products)		
Background:	Serine-type endopeptidase involved in atrial natriuretic peptide hormone (NPPA) processing.		
	Converts through proteolytic cleavage the non-functional propeptide NPPA into the active		
	hormone, thereby regulating blood pressure in heart and promoting natriuresis, diuresis and		
	vasodilation. Proteolytic cleavage of pro-NPPA also plays a role in female pregnancy by		
	promoting trophoblast invasion and spiral artery remodeling in uterus. Also acts as a regulator		
	of sodium reabsorption in kidney. May also process pro-NPPB the B-type natriuretic peptide.,		
	Isoform 2: has weaker endopeptidase activity compared to isoform 1.		
Molecular Weight:	72.7 kDa Including tag.		
UniProt:	Q9Y5Q5		
Pathways:	Regulation of Systemic Arterial Blood Pressure by Hormones		

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
