

# Datasheet for ABIN3119856 Pallidin Protein (AA 1-172) (Strep Tag)

Overview Quantity: 1 mg Pallidin (PLDN) Target: Protein Characteristics: AA 1-172 Origin: Mouse Source: Tobacco (Nicotiana tabacum) Protein Type: Recombinant Purification tag / Conjugate: This Pallidin protein is labelled with Strep Tag. Application: SDS-PAGE (SDS), ELISA, Western Blotting (WB) Product Details Sequence: MSVPEPPPPD GVLTGPSDSL EAGEPTPGLS DTSPDEGLIE DFPVDDRAVE HLVGGLLSHY LPDLQRSKRA LQELTQNQVV LLDTLEQEIS KFKECHSMLD INALFTEAKH YHAKLVTIRK EMLLLHEKTS KLKKRALKLQ QKRQREELER EQQREKEFER EKQLTAKPAK RT Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us. Characteristics: Key Benefits: • Made in Germany - from design to production - by highly experienced protein experts. · Protein expressed with ALiCE® and purified in one-step affinity chromatography These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed). • State-of-the-art algorithm used for plasmid design (Gene synthesis).

All rights reserved. This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression	
	System (AliCE®).	
Purity:	> 80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).	

### **Target Details**

Target:	Pallidin (PLDN)
Alternative Name:	Bloc1s6 (PLDN Products)
Background:	Biogenesis of lysosome-related organelles complex 1 subunit 6 (BLOC-1 subunit 6) (Pallid protein) (Pallidin) (Syntaxin 13-interacting protein),FUNCTION: Component of the BLOC-1
	complex, a complex that is required for normal biogenesis of lysosome-related organelles (LRO), such as platelet dense granules and melanosomes. In concert with the AP-3 complex,

All rights reserved.

	the BLOC-1 complex is required to target membrane protein cargos into vesicles assembled at
	cell bodies for delivery into neurites and nerve terminals. The BLOC-1 complex, in association
	with SNARE proteins, is also proposed to be involved in neurite extension. May play a role in
	intracellular vesicle trafficking, particularly in the vesicle-docking and fusion process.
	{ECO:0000269 PubMed:16760431, ECO:0000269 PubMed:17182842,
	ECO:0000269 PubMed:19546860, ECO:0000269 PubMed:21998198}.
Molecular Weight:	19.7 kDa
UniProt:	Q9R0C0
Pathways:	Synaptic Vesicle Exocytosis

## Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only

## Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
