

Datasheet for ABIN3120470 GFER Protein (AA 1-198) (Strep Tag)

Overview

Quantity:	250 µg
Target:	GFER
Protein Characteristics:	AA 1-198
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This GFER protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA

Product Details

Brand:	AliCE®
Sequence:	MAAPSEPAGF PRGSRFSFLP GGARSEMTDD LVTDARGRGA RHRDDTTPAA APAPQGLEHG
	KRPCRACVDF KSWMRTQQKR DIKFREDCPQ DREELGRHTW AFLHTLAAYY PDRPTPEQQQ
	DMAQFIHIFS KFYPCEECAE DIRKRIGRNQ PDTSTRVSFS QWLCRLHNEV NRKLGKPDFD
	CSRVDERWRD GWKDGSCD
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	, , , , , , , , , , , , , , , , , , , ,
	Protein expressed with ALICE® and purified in one-step affinity chromatography

• State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	GFER
Alternative Name:	Gfer (GFER Products)
Background:	FAD-linked sulfhydryl oxidase ALR (EC 1.8.3.2) (Augmenter of liver regeneration),FUNCTION:

All rights reserved.

Target Details

	FAD-dependent sulfhydryl oxidase that regenerates the redox-active disulfide bonds in
	CHCHD4/MIA40, a chaperone essential for disulfide bond formation and protein folding in the
	mitochondrial intermembrane space. The reduced form of CHCHD4/MIA40 forms a transient
	intermolecular disulfide bridge with GFER/ERV1, resulting in regeneration of the essential
	disulfide bonds in CHCHD4/MIA40, while GFER/ERV1 becomes re-oxidized by donating
	electrons to cytochrome c or molecular oxygen (By similarity).
	{ECO:0000250 UniProtKB:P55789}.
Molecular Weight:	22.9 kDa
UniProt:	P56213
Pathways:	SARS-CoV-2 Protein Interactome
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational

modifications.

During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions: For Research Use only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.
