

Datasheet for ABIN3120798 TCEB2 Protein (AA 1-118) (Strep Tag)

Overview

Quantity:	250 µg
Target:	TCEB2
Protein Characteristics:	AA 1-118
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This TCEB2 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), Western Blotting (WB), ELISA

Product Details

Brand:	AliCE®
Sequence:	MDVFLMIRRH KTTIFTDAKE SSTVFELKRI VEGILKRPPE EQRLYKDDQL LDDGKTLGEC
	GFTSQTARPQ APATVGLAFR ADDTFEALRI EPFSSPPELP DVMKPQDSGG SANEQAVQ
	Sequence without tag. The proposed Strep-Tag is based on experience \ensuremath{s} with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALICE® and pullied in one-step annity chromatography
	reported (not tested by us and not guaranteed)
	 State-of-the-art algorithm used for plasmid design (Gene synthesis).

All rights reserved. This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	TCEB2
Alternative Name:	Elob (TCEB2 Products)
Background:	Elongin-B (EloB) (Elongin 18 kDa subunit) (RNA polymerase II transcription factor SIII subunit B) (SIII p18) (Transcription elongation factor B polypeptide 2),FUNCTION: SIII, also known as elongin, is a general transcription elongation factor that increases the RNA polymerase II

transcription elongation past template-encoded arresting sites. Subunit A is transcriptionally
active and its transcription activity is strongly enhanced by binding to the dimeric complex of
the SIII regulatory subunits B and C (elongin BC complex) (By similarity). In embryonic stem
cells, the elongin BC complex is recruited by EPOP to Polycomb group (PcG) target genes in
order generate genomic region that display both active and repressive chromatin properties, an
important feature of pluripotent stem cells (PubMed:27863225, PubMed:27863226).
{EC0:0000250 UniProtKB:Q15370, EC0:0000269 PubMed:27863225,
EC0:0000269 PubMed:27863226}., FUNCTION: Core component of multiple cullin-RING-based
ECS (ElonginB/C-CUL2/5-SOCS-box protein) E3 ubiquitin-protein ligase complexes, which
mediate the ubiquitination of target proteins. This includes the von Hippel-Lindau ubiquitination
complex CBC(VHL). By binding to BC-box motifs it seems to link target recruitment subunits,
like VHL and members of the SOCS box family, to Cullin/RBX1 modules that activate E2 $$
ubiquitination enzymes. As part of a multisubunit ubiquitin ligase complex composed of elongin
BC complex (ELOB and ELOC), elongin A/ELOA, RBX1 and CUL5, polyubiquitinates
monoubiquitinated POLR2A (By similarity). A number of ECS complexes (containing either
KLHDC2, KLHDC3, KLHDC10, APPBP2, FEM1A, FEM1B or FEM1C as substrate-recognition
component) are part of the DesCEND (destruction via C-end degrons) pathway, which
recognizes a C-degron located at the extreme C terminus of target proteins, leading to their
ubiquitination and degradation. ECS(LRR1) ubiquitinates MCM7 and promotes CMG replisome
disassembly by VCP and chromatin extraction during S-phase (PubMed:33590678).
{ECO:0000250 UniProtKB:Q15370, ECO:0000269 PubMed:33590678}.

Molecular Weight:	13.2 kDa
UniProt:	P62869
Pathways:	SARS-CoV-2 Protein Interactome

Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
