Target:	PSME2
Alternative Name:	Psme2 (PSME2 Products)
Background:	Implicated in immunoproteasome assembly and required for efficient antigen processing. The
	PA28 activator complex enhances the generation of class I binding peptides by altering the
	cleavage pattern of the proteasome.

Target Details	
Molecular Weight:	27.9 kDa Including tag.
UniProt:	P97372
Pathways:	Mitotic G1-G1/S Phases, DNA Replication, Positive Regulation of Endopeptidase Activity, Synthesis of DNA

## Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.
Restrictions:	For Research Use only
