

Datasheet for ABIN3124708 GSKIP Protein (AA 1-139) (Strep Tag)

Overview

Quantity:	1 mg
Target:	GSKIP
Protein Characteristics:	AA 1-139
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This GSKIP protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Brand:	AliCE®
Sequence:	METDYNPVEL SSMSGFEEGS ELNGFEGADM KDMQLEAEAV VNDVLFAVNH MFVSKSMPCA
	DDVAYINVET KERNRYCLEL TEAGLRVVGY AFDQVEDHLQ TPYHETVYSL LDTLSPAYRE
	AFGNALLQRL EALKRDGQS
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	• Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified in one-step affinity chromatography
	 I hese proteins are normally active (enzymatically functional) as our customers have
	 These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	GSKIP
Alternative Name:	Gskip (GSKIP Products)
Background:	GSK3B-interacting protein (GSKIP),FUNCTION: A-kinase anchoring protein for GSK3B and PKA
	that regulates or facilitates their kinase activity towards their targets. The ternary complex

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/4 | Product datasheet for ABIN3124708 | 02/25/2025 | Copyright antibodies-online. All rights reserved.

	enhances Wnt-induced signaling by facilitating the GSK3B- and PKA-induced phosphorylation
	of beta-catenin leading to beta-catenin degradation and stabilization respectively. Upon cAMP
	activation, the ternary complex contributes to neuroprotection against oxidative stress-induced
	apoptosis by facilitating the PKA-induced phosphorylation of DML1 and PKA-induced
	inactivation of GSK3B. During neurite outgrowth promotes neuron proliferation, while increases
	beta-catenin-induced transcriptional activity through GSK3B kinase activity inhibition, reduces
	N-cadherin level to promote cell cycle progression (By similarity). May play a role in cleft palate
	formation and is required for postnatal life through modulation of the activity of GSK3B during
	development (PubMed:26582204). {ECO:0000250 UniProtKB:Q9P0R6,
	EC0:0000269 PubMed:26582204}.
Molecular Weight:	15.6 kDa
UniProt:	Q8BGR8
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer.
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.

Handling

Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
