NETO2 Protein (AA 369-525) (His tag)

Image

Go to Product page

\sim			
	N/6	1//r	$I \cap V$

Quantity: 1 mg		
Target: NETO2		
Protein Characteristics: AA 369-525		
Origin: Mouse		
Source: Insect Cells		
Protein Type: Recombinant		
Purification tag / Conjugate: This NETO2 protein is labelled with His	tag.	
Application: ELISA, Western Blotting (WB), Crystalli	ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)

Sequence: QVKQPRKKVM ACKTAFNKTG FQEVFI STASRCIHDH HCGSQASSVK QSRTNL HECPEQALED RVMEEIPCEI YVRGRDE Sequence without tag. Tag location is special request, please contact us. Characteristics: • Made in Germany - from design to possible to ensure crystallization grade. • State-of-the-art algorithm used for possible to ensure crystallization grade.	SSME LPFRNDFAQP QPMKTFNSTF KKSSYTFKQA SAQ ASISIDF at the discretion of the manufacturer. If you have a roduction - by highly experienced protein experts. ct Cells) purified by multi-step, protein-specific process lasmid design (Gene synthesis). and will be made for the first time for your order. Our	

made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

In the unlikely event that the protein cannot be expressed or purified we do not charge anything (other companies might charge you for any performed steps in the expression process for custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression experiments or purification optimization).

When you order this made-to-order protein you will only pay upon receival of the correctly folded protein. With no financial risk on your end you can rest assured that our experienced protein experts will do everything to make sure that you receive the protein you ordered.

The concentration of our recombinant proteins is measured using the absorbance at 280nm.

The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.

The concentration of the protein is calculated using its specific absorption coefficient. We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in baculovirus infected SF9 insect cells:

- 1. In a first purification step, the protein is purified from the cleared cell lysate using three different His-tag capture materials: high yield, EDTA resistant, or DTT resistant. Eluate fractions are analyzed by SDS-PAGE.
- 2. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatography. Eluate fractions are analyzed by SDS-PAGE and Western blot.

Purity:

>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.

Sterility:

0.22 µm filtered

Endotoxin Level:

Protein is endotoxin free.

Grade:

Crystallography grade

Target Details

Target:	NETO2	
Alternative Name:	Neto2 (NETO2 Products)	
Background:	Accessory subunit of neuronal kainate-sensitive glutamate receptors, GRIK2 and GRIK3.	
	Increases kainate-receptor channel activity, slowing the decay kinetics of the receptors, without	
	affecting their expression at the cell surface, and increasing the open probability of the receptor	
	channels. Modulates the agonist sensitivity of kainate receptors. Slows the decay of kainate	

Target Details

Expiry Date:

l arget Details		
	receptor-mediated excitatory postsynaptic currents (EPSCs), thus directly influencing synaptic transmission (By similarity). {ECO:0000250}.	
Molecular Weight:	19.0 kDa Including tag.	
UniProt:	Q8BNJ6	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee though.	
Comment:	Protein has not been tested for activity yet. In cases in which it is highly likely that the recombinant protein with the default tag will be insoluble our protein lab may suggest a higher molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible options with you in detail to assure that you receive your protein of interest.	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	
Storage Comment:	Store at -80°C.	

Unlimited (if stored properly)
