

Datasheet for ABIN3125319 SNX17 Protein (AA 1-470) (Strep Tag)

Overview

Quantity:	250 µg
Target:	SNX17
Protein Characteristics:	AA 1-470
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SNX17 protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA

Product Details

	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression
	system, a different complexity of the protein could make another tag necessary. In case you

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

Target Details

Target:	SNX17
Alternative Name:	Snx17 (SNX17 Products)
Background:	Sorting nexin-17,FUNCTION: Critical regulator of endosomal recycling of numerous surface
	proteins, including integrins, signaling receptor and channels (PubMed:12169628,
	PubMed:16052210). Binds to NPxY sequences in the cytoplasmic tails of target cargos (By
	similarity). Associates with retriever and CCC complexes to prevent lysosomal degradation and
	promote cell surface recycling of numerous cargos such as integrins ITGB1, ITGB5 and their
	associated alpha subunits (By similarity). Also required for maintenance of normal cell surface
	levels of APP and LRP1 (PubMed:16052210, PubMed:18276590). Interacts with membranes
	containing phosphatidylinositol 3-phosphate (PtdIns(3P)) (By similarity).
	{EC0:0000250 UniProtKB:Q15036, EC0:0000269 PubMed:12169628,
	ECO:0000269 PubMed:16052210, ECO:0000269 PubMed:18276590}.
Molecular Weight:	52.8 kDa
UniProt:	Q8BVL3
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
