## GIMAP5 Protein (AA 1-308) (Strep Tag)

[Go to Product page](#)

### Overview

Quantity:	250 µg
Target:	GIMAP5
Protein Characteristics:	AA 1-308
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This GIMAP5 protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB)

### Product Details

Brand:	AlIcE®
Sequence:	<p>MEHLQKSTYG TIVQGPEAHC VQESSCLRIL LVGKSGCGKS ATGNSILRRP AFQSRLRGQS  VTRTSQAETG TWEGRSILVV DTPPIFESKA QNQDMDKDIG DCYLLCAPGP HVLLLVTQLG  RFTAEDAMAV RMVKEVFGVG VMRHMIVLFT RKEDLEEKSL EEFVTHTDNR SLRSLTQECG  RRYCAFNNRA SGEEQQGQLA ELMALVRRLE QECEGSFHSN DLFLHAEALL REGYSVHQEA  YRCYLAKVRQ EVEKQRRELE EQEGSWIAKM ICTVKSCWSS HTAACALLIV LGLTLLTTFI  NLCISRCK</p> <p><b>Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.</b></p>
Characteristics:	Key Benefits:

## Product Details

---

- Made in Germany - from design to production - by highly experienced protein experts.
- Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

### Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from *Nicotiana tabacum* c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made

## Target Details

---

Target:	GIMAP5

---

## Target Details

Alternative Name:	Gimap5 ( <a href="#">GIMAP5 Products</a> )
Background:	<p>GTPase IMAP family member 5 (GTPase of the immunity-associated protein 5) (Immunity-associated nucleotide 4-like 1 protein) (Immunity-associated protein 3),FUNCTION: Plays a role in T lymphocyte development and the optimal generation of CD4/CD8 double-positive thymocytes (PubMed:16509771). Inhibitor of GSK3A. May act by sequestering GSK3A in cytoplasmic vesicles and impairing its translocation to the nucleus. Consequently, impairs GSK3A-dependent transcriptional program and regulation of the DNA damage response occurring during T cells proliferation (PubMed:29382851). Required for the survival of bone marrow hematopoietic stem cells, as well as of peripheral T cells, natural killer (NK) and NK T-cell development and the maintenance of normal liver function (PubMed:18796632, PubMed:21502331). May promote the survival of mature T lymphocytes upon cytokine withdrawal (PubMed:16509771). May regulate Ca(2+) homeostasis by modulating lysosomal Ca(2+) stores, preventing its accumulation in the absence of T cell activation (By similarity). May play a role in mitochondrial DNA segregation in hematopoietic tissues (PubMed:25808953). Is a regulator of liver endothelial cell homeostasis (PubMed:33956074). {ECO:0000250 UniProtKB:Q8K3L6, ECO:0000269 PubMed:16509771, ECO:0000269 PubMed:18796632, ECO:0000269 PubMed:21502331, ECO:0000269 PubMed:25808953, ECO:0000269 PubMed:29382851, ECO:0000269 PubMed:33956074}.</p>
Molecular Weight:	34.7 kDa
UniProt:	<a href="#">Q8BWF2</a>
Pathways:	<a href="#">Regulation of Leukocyte Mediated Immunity</a> , <a href="#">Positive Regulation of Immune Effector Process</a> , <a href="#">Production of Molecular Mediator of Immune Response</a>

## Application Details

Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies as well. As the protein has not been tested for functional studies yet we cannot offer a guarantee though.
Comment:	<p>ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from <i>Nicotiana tabacum</i> c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.</p> <p>During lysate production, the cell wall and other cellular components that are not required for</p>

## Application Details

---

protein production are removed, leaving only the protein production machinery and the mitochondria to drive the reaction. During our lysate completion steps, the additional components needed for protein production (amino acids, cofactors, etc.) are added to produce something that functions like a cell, but without the constraints of a living system - all that's needed is the DNA that codes for the desired protein!

Restrictions: For Research Use only

## Handling

---

Format: Liquid

Buffer: The buffer composition is at the discretion of the manufacturer.  
Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol **Might differ depending on protein.**

Handling Advice: Avoid repeated freeze-thaw cycles.

Storage: -80 °C

Storage Comment: Store at -80°C.

Expiry Date: 12 months
