

# Datasheet for ABIN3127425 DCXR Protein (AA 1-244) (Strep Tag)

Oo to rioduct page

_					
	W	0	rv	10	W

Quantity:	1 mg
Target:	DCXR
Protein Characteristics:	AA 1-244
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This DCXR protein is labelled with Strep Tag.
Application:	SDS-PAGE (SDS), ELISA, Western Blotting (WB)
Product Details	
Brand:	AliCE®
Brand: Sequence:	AliCE®  MDLGLAGRRA LVTGAGKGIG RSTVLALKAA GAQVVAVSRT REDLDDLVRE CPGVEPVCVD

	MDLGLAGRRA LVTGAGKGIG RSTVLALKAA GAQVVAVSRT REDLDDLVRE CPGVEPVCVD LADWEATEQA LSNVGPVDLL VNNAAVALLQ PFLEVTKEAC DTSFNVNLRA VIQVSQIVAK GMIARGVPGA IVNVSSQASQ RALTNHTVYC STKGALDMLT KMMALELGPH KIRVNAVNPT VVMTPMGRTN WSDPHKAKAM LDRIPLGKFA EVENVVDTIL FLLSNRSGMT TGSTLPVDGG FLAT  Sequence without tag. The proposed Strep-Tag is based on experience s with the expression system, a different complexity of the protein could make another tag necessary. In case you

- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

#### Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

#### Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression
	System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made
Target Details	
Target:	DCXR
Alternative Name:	Dexr (DCXR Products)

### **Target Details**

9		
Background:	L-xylulose reductase (XR) (EC 1.1.1.10) (Dicarbonyl/L-xylulose reductase),FUNCTION: Catalyzes the NADPH-dependent reduction of several pentoses, tetroses, trioses, alpha-dicarbonyl	
	compounds and L-xylulose. Participates in the uronate cycle of glucose metabolism. May play a	
	role in the water absorption and cellular osmoregulation in the proximal renal tubules by	
	producing xylitol, an osmolyte, thereby preventing osmolytic stress from occurring in the renal	
	tubules.	
Molecular Weight:	25.7 kDa	
UniProt:	Q91X52	
Pathways:	Glycosaminoglycan Metabolic Process, Monocarboxylic Acid Catabolic Process	
Application Details		
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies	
	as well. As the protein has not been tested for functional studies yet we cannot offer a	
	guarantee though.	
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from	
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce	
	even the most difficult-to-express proteins, including those that require post-translational modifications.	
	During lysate production, the cell wall and other cellular components that are not required for	
	protein production are removed, leaving only the protein production machinery and the	
	mitochondria to drive the reaction. During our lysate completion steps, the additional	
	components needed for protein production (amino acids, cofactors, etc.) are added to produce	
	something that functions like a cell, but without the constraints of a living system - all that's	
	needed is the DNA that codes for the desired protein!	
Restrictions:	For Research Use only	
Handling		
Format:	Liquid	
Buffer:	The buffer composition is at the discretion of the manufacturer.	
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.	
Handling Advice:	Avoid repeated freeze-thaw cycles.	
Storage:	-80 °C	

## Handling

Storage Comment:	Store at -80°C.
Expiry Date:	12 months
