## Datasheet for ABIN3127873 KDELR1 Protein (AA 1-212) (rho-1D4 tag)

Image

| Overview                      |                                                                                                 |
|-------------------------------|-------------------------------------------------------------------------------------------------|
| Quantity:                     | 1 mg                                                                                            |
| Target:                       | KDELR1                                                                                          |
| Protein Characteristics:      | AA 1-212                                                                                        |
| Origin:                       | Mouse                                                                                           |
| Source:                       | Insect Cells                                                                                    |
| Protein Type:                 | Recombinant                                                                                     |
| Purification tag / Conjugate: | This KDELR1 protein is labelled with rho-1D4 tag.                                               |
| Application:                  | ELISA, Western Blotting (WB), Crystallization (Crys), SDS-PAGE (SDS)                            |
| Product Details               |                                                                                                 |

|                               | Sequence without tag. Tag location is at the discretion of the manufacturer. If you have a      |
|                               | special request, please contact us.                                                             |
| Characteristics:              | Made in Germany - from design to production - by highly experienced protein experts.            |
|                               | Mouse Kdelr1 Protein (raised in Insect Cells) purified by multi-step, protein-specific process  |
|                               | to ensure crystallization grade.                                                                |
|                               | State-of-the-art algorithm used for plasmid design (Gene synthesis).                            |
|                               | This protein is a made to order protein and will be made for the first time for your order. Our |
|                               | experts in the lab will ensure that you receive a correctly folded protein.                     |

|                   | The big advantage of ordering our made-to-order proteins in comparison to ordering custom<br>made proteins from other companies is that there is no financial obligation in case the protein<br>cannot be expressed or purified.<br>In the unlikely event that the protein cannot be expressed or purified we do not charge anything<br>(other companies might charge you for any performed steps in the expression process for<br>custom-made proteins, e.g. fees might apply for the expression plasmid, the first expression<br>experiments or purification optimization).<br>When you order this made-to-order protein you will only pay upon receival of the correctly<br>folded protein. With no financial risk on your end you can rest assured that our experienced<br>protein experts will do everything to make sure that you receive the protein you ordered.<br>The concentration of our recombinant proteins is measured using the absorbance at 280nm.<br>The protein's absorbance will be measured in several dilutions and is measured against its<br>specific reference buffer.<br>The concentration of the protein is calculated using its specific absorption coefficient. We use<br>the Expasy's protparam tool to determine the absorption coefficient of each protein. |

| Purification:     | <ul> <li>Three step purification of membrane proteins expressed in baculovirus infected SF9 insect cells:</li> <li>1. Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.</li> <li>2. The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.</li> <li>3. Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Purity:           | >95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Sterility:        | 0.22 µm filtered                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Endotoxin Level:  | Protein is endotoxin-free.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Target Details

|                     | recycling. This receptor recognizes the C-terminal K-D-E-L motif. COPI-coated transport           |
|---------------------|---------------------------------------------------------------------------------------------------|
|                     | intermediates, either in the form of round vesicles or as tubular processes, mediate retrograde   |
|                     | traffic of the KDEL receptor-ligand complexes. Also required for normal vesicular traffic through |
|                     | the Golgi (By similarity). {ECO:0000250}.                                                         |
| Molecular Weight:   | 25.7 kDa Including tag.                                                                           |
| UniProt:            | Q99JH8                                                                                            |
| Pathways:           | Maintenance of Protein Location                                                                   |
| Application Details |                                                                                                   |
| Application Notes:  | In addition to the applications listed above we expect the protein to work for functional studies |
|                     | as well. As the protein has not been tested for functional studies yet we cannot offer a gurantee |
|                     | though.                                                                                           |
| Comment:            | Protein has not been tested for activity yet. In cases in which it is highly likely that the      |
|                     | recombinant protein with the default tag will be insoluble our protein lab may suggest a higher   |
|                     | molecular weight tag (e.g. GST-tag) instead to increase solubility. We will discuss all possible  |
|                     | options with you in detail to assure that you receive your protein of interest.                   |
| Restrictions:       | For Research Use only                                                                             |
| Handling            |                                                                                                   |
| Format:             | Liquid                                                                                            |
| Buffer:             | 100 mM NaCL, 20 mM Hepes, 10% glycerol. pH value is at the discretion of the manufacturer.        |
| Handling Advice:    | Avoid repeated freeze-thaw cycles.                                                                |
| Storage:            | -80 °C                                                                                            |
| Storage Comment:    | Store at -80°C.                                                                                   |
| Expiry Date:        | Unlimited (if stored properly)                                                                    |

**Image 1.** "Crystallography Grade" protein due to multi-step, protein-specific purification process
