MTAP Protein (AA 1-283) (Strep Tag)

Go to Product page

_						
	V	\triangle	r۱	/1	\triangle	Λ/
	' V '		ΙV			v v

Characteristics:

Quantity:	1 mg
Target:	MTAP
Protein Characteristics:	AA 1-283
Origin:	Mouse
Source:	Cell-free protein synthesis (CFPS)
Protein Type:	Recombinant
Purification tag / Conjugate:	This MTAP protein is labelled with Strep Tag.
Application:	Western Blotting (WB), SDS-PAGE (SDS), ELISA
Product Details	
Brand:	AliCE®
Sequence:	MASGSACTAV KIGIIGGTGL DDPEILEGRT EKYVDTPFGK PSDALILGKI KNVDCVLLAR
	HGRQHTIMPS KVNYQANIWA LKEEGCTHVI VTTACGSLRE EIQPGDMVII DQFIDRTSLR
	PQTFYDGSHC SARGVCHIPM AEPFCPKTRE VLIETAKKLG LRCHSKGTIV TIEGPRFSSR
	AESLIFRTWG ADVVNMTTVP EVVLAKEAGI CYASIAMATD YDCWKEHEEA VSVDGVLKTM
	KENANKAKSL LLTTIPQIGS MEWSETLRNL KNMAQFSVLP PRH
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expression

• Made in Germany - from design to production - by highly experienced protein experts.

have a special request, please contact us.

Key Benefits:

Alternative Name:

- · Protein expressed with ALiCE® and purified in one-step affinity chromatography
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

Mtap (MTAP Products)

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 70-80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).
Grade:	custom-made
Target Details	
Target:	MTAP

Target Details

Background:	S-methyl-5'-thioadenosine phosphorylase (EC 2.4.2.28) (5'-methylthioadenosine phosphorylase
	(MTA phosphorylase) (MTAP) (MTAPase),FUNCTION: Catalyzes the reversible phosphorylation
	of S-methyl-5'-thioadenosine (MTA) to adenine and 5-methylthioribose-1-phosphate. Involved in
	the breakdown of MTA, a major by-product of polyamine biosynthesis. Responsible for the first
	step in the methionine salvage pathway after MTA has been generated from S-
	adenosylmethionine. Has broad substrate specificity with 6-aminopurine nucleosides as
	preferred substrates. {ECO:0000255 HAMAP-Rule:MF_03155}.
Molecular Weight:	31.1 kDa
UniProt:	Q9CQ65
Pathways:	Ribonucleoside Biosynthetic Process, Methionine Biosynthetic Process
Application Details	
Application Notes:	In addition to the applications listed above we expect the protein to work for functional studies
	as well. As the protein has not been tested for functional studies yet we cannot offer a
	guarantee though.
Comment:	ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
	Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
	even the most difficult-to-express proteins, including those that require post-translational
	modifications.
	During lysate production, the cell wall and other cellular components that are not required for
	protein production are removed, leaving only the protein production machinery and the
	mitochondria to drive the reaction. During our lysate completion steps, the additional
	components needed for protein production (amino acids, cofactors, etc.) are added to produce
	something that functions like a cell, but without the constraints of a living system - all that's
	needed is the DNA that codes for the desired protein!
Restrictions:	For Research Use only
Handling	
Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer.
	Standard Storage Buffer: PBS pH 7.4, 10 % Glycerol Might differ depending on protein.
Handling Advice:	Avoid repeated freeze-thaw cycles.

Handling

Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	12 months
