

## Datasheet for ABIN3128979 SENP8 Protein (AA 1-221) (Strep Tag)

Overview	
Quantity:	1 mg
Target:	SENP8
Protein Characteristics:	AA 1-221
Origin:	Mouse
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This SENP8 protein is labelled with Strep Tag.
Application:	ELISA, SDS-PAGE (SDS), Western Blotting (WB)
Product Details	
Sequence:	MDPVVLSYMD SLLRQSDVSL LDPPSWLNDH IIGFAFEYFA NSQFHDCSDH VCFISPEVTQ
	FIKCTSSPAE IAMFLEPLDL PHKRVVFLAI NDNSNQAAGG THWSLLVYLQ DKNSFFHYDS
	HSRSNSIHAK QVAEKLKAFL GSKGDKLVFV EEKAPAQENS YDCGMYVICN TEALCQSLFR
	RQPESPLQLL TPTYITKKRG EWKDLIARLA KKNEVATEEC S
	Sequence without tag. The proposed Strep-Tag is based on experience s with the expressio
	system, a different complexity of the protein could make another tag necessary. In case you
	have a special request, please contact us.
Characteristics:	Key Benefits:
	Made in Germany - from design to production - by highly experienced protein experts.
	Protein expressed with ALiCE® and purified in one-step affinity chromatography
	<ul> <li>These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).</li> </ul>

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab try to ensure that you receive soluble protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

## Expression System:

- ALICE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require post-translational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
  protein production are removed, leaving only the protein production machinery and the
  mitochondria to drive the reaction. During our lysate completion steps, the additional
  components needed for protein production (amino acids, cofactors, etc.) are added to
  produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

## Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured against its specific reference buffer.
- We use the Expasy's ProtParam tool to determine the absorption coefficient of each protein.

Purification:	One-step Strep-tag purification of proteins expressed in Almost Living Cell-Free Expression System (AliCE®).
Purity:	> 80 % as determined by SDS PAGE, Western Blot and analytical SEC (HPLC).

## **Target Details**

Target:	SENP8
Alternative Name:	Senp8 (SENP8 Products)
Background:	Sentrin-specific protease 8 (EC 3.4.22) (Deneddylase-1) (NEDD8-specific protease 1) (Sentrin/SUMO-specific protease SENP8),FUNCTION: Protease that catalyzes two essential
	functions in the NEDD8 pathway: processing of full-length NEDD8 to its mature form and

deconjugation of NEDD8 from targeted proteins such as cullins or p53. {ECO:0000269 PubMed:12759362}. 25.1 kDa Q9D2Z4
25.1 kDa
Q9D2Z4
In addition to the applications listed above we expect the protein to work for functional studies
as well. As the protein has not been tested for functional studies yet we cannot offer a
guarantee though.
ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from
Nicotiana tabacum c.v This contains all the protein expression machinery needed to produce
even the most difficult-to-express proteins, including those that require post-translational
modifications.
During lysate production, the cell wall and other cellular components that are not required for
protein production are removed, leaving only the protein production machinery and the
mitochondria to drive the reaction. During our lysate completion steps, the additional
components needed for protein production (amino acids, cofactors, etc.) are added to produce
something that functions like a cell, but without the constraints of a living system - all that's
needed is the DNA that codes for the desired protein!
