RAB11FIP1 Protein (AA 1-645) (Strep Tag)

Overview

Quantity:	1 mg
Target:	RAB11FIP1
Protein Characteristics:	AA 1-645
Origin:	Mouse
Source:	Tobacco (Nicotiana tabacum)
Protein Type:	Recombinant
Purification tag / Conjugate:	This RAB11FIP1 protein is labelled with Strep Tag.
Application:	ELISA, Western Blotting (WB), SDS-PAGE (SDS)

Product Details

Sequence:

Sequence without tag. The proposed Strep-Tag is based on experience s with the expression

system, a different complexity of the protein could make another tag necessary. In case you have a special request, please contact us.

Characteristics:

Key Benefits:

- Made in Germany from design to production by highly experienced protein experts.
- Protein expressed with ALiCE® and purified by multi-step, protein-specific process to ensure correct folding and modification.
- These proteins are normally active (enzymatically functional) as our customers have reported (not tested by us and not guaranteed).
- · State-of-the-art algorithm used for plasmid design (Gene synthesis).

This protein is a **made-to-order protein** and will be made for the first time for your order. Our experts in the lab will ensure that you receive a correctly folded protein.

The big advantage of ordering our **made-to-order proteins** in comparison to ordering custom made proteins from other companies is that there is no financial obligation in case the protein cannot be expressed or purified.

Expression System:

- ALiCE®, our Almost Living Cell-Free Expression System is based on a lysate obtained from Nicotiana tabacum c.v.. This contains all the protein expression machinery needed to produce even the most difficult-to-express proteins, including those that require posttranslational modifications.
- During lysate production, the cell wall and other cellular components that are not required for
 protein production are removed, leaving only the protein production machinery and the
 mitochondria to drive the reaction. During our lysate completion steps, the additional
 components needed for protein production (amino acids, cofactors, etc.) are added to
 produce something that functions like a cell, but without the constraints of a living system all that's needed is the DNA that codes for the desired protein!

Concentration:

- The concentration of our recombinant proteins is measured using the absorbance at 280nm.
- The protein's absorbance will be measured in several dilutions and is measured against its specific reference buffer.
- We use the Expasy's protparam tool to determine the absorption coefficient of each protein.

Purification:

Two step purification of proteins expressed in Almost Living Cell-Free Expression System (ALiCE®):

1. In a first purification step, the protein is purified from the cleared cell lysate using StrepTag

	mined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Endotoxin Level: Low Endotoxin	Timed by 656 17 (62, 6126 Exoldsion officinategraphy and Treetern Blot.
	less than 1 EU/mg (< 0.1 ng/mg)
Target Details	
Target: RAB11FIP1	
Alternative Name: Rab11fip1 (RAI	B11FIP1 Products)
effector proteir	nteracting protein 1 (Rab11-FIP1) (Rab-coupling protein),FUNCTION: A Rab11 involved in the endosomal recycling process. Also involved in controlling ficking along the phagocytic pathway and phagocytosis (By similarity).
Molecular Weight: 70.7 kDa	
UniProt: Q9D620	
Application Details	
	ne applications listed above we expect the protein to work for functional studies protein has not been tested for functional studies yet we cannot offer a gh.
Nicotiana tabade even the most of modifications. During lysate protein product mitochondria to components no something that	most Living Cell-Free Expression System is based on a lysate obtained from cum c.v This contains all the protein expression machinery needed to produce difficult-to-express proteins, including those that require post-translational roduction, the cell wall and other cellular components that are not required for cion are removed, leaving only the protein production machinery and the drive the reaction. During our lysate completion steps, the additional seeded for protein production (amino acids, cofactors, etc.) are added to produce functions like a cell, but without the constraints of a living system - all that's and that codes for the desired protein!
Restrictions: For Research U	lse only

Handling

Format:	Liquid
Buffer:	The buffer composition is at the discretion of the manufacturer. If you have a special request, please contact us.
Handling Advice:	Avoid repeated freeze-thaw cycles.
Storage:	-80 °C
Storage Comment:	Store at -80°C.
Expiry Date:	Unlimited (if stored properly)
